

Applicator Guide

At Elekta we believe that our solutions, services and extensive knowledge of precisely targeted radiation therapy play a vital role in the successful treatment of cancer. Our key technological advances have resulted in an integrated package of brachytherapy treatment planning and delivery systems. This applicator guide provides a comprehensive overview of the Elekta applicator portfolio for brachytherapy.

Elekta Brachytherapy

Elekta Brachytherapy solutions are part of Elekta's leading radiation therapy portfolio and encompass more than 40 years of Nucletron® innovations. The latest advancements include Flexitron® treatment delivery, new Oncentra® Brachy treatment planning modules- and a variety of new and innovative applicators.

Industry-leading brachytherapy applicator portfolio

Applicators are a pivotal part of Elekta's fully integrated solutions. With a broad portfolio of dedicated applicators, we offer a complete applicator range for more than 15 types of cancer in a variety of anatomies, developed in close collaboration with clinical experts. With applicators that are leading in 3D imaging compatibility as well as a legacy of 2D products, you can select from the largest applicator portfolio to match your choice of treatment and clinical setup.

Flexitron treatment delivery

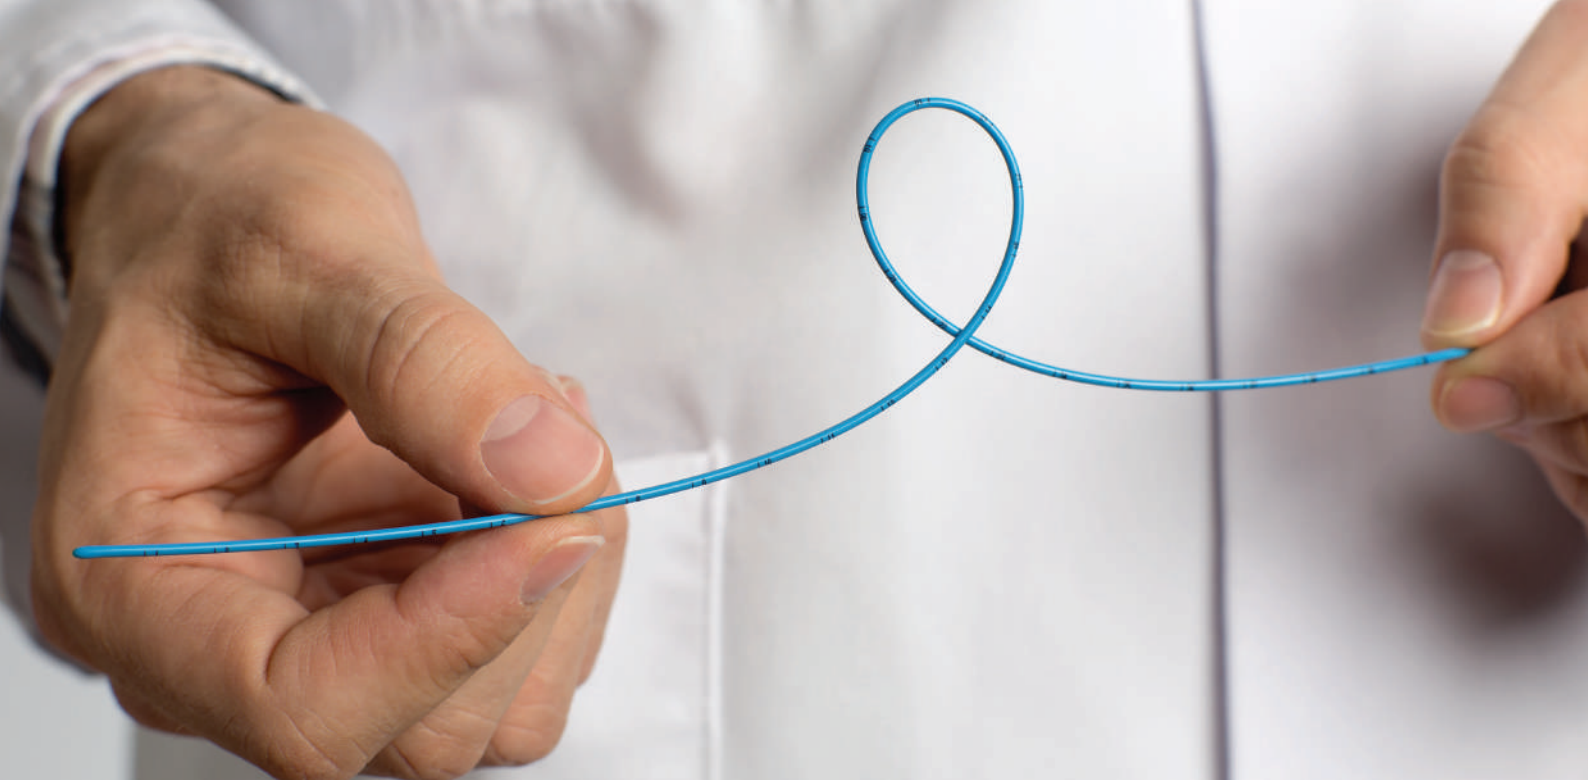

Elekta's afterloading platforms have established an unparalleled reputation for reliability, safety and performance in treatment delivery. Their all-in-one versatility and unmatched flexibility prove their value on a daily basis in the majority of brachytherapy institutes around the world.

The new 'Safety through simplicity' Flexitron family is designed for safety and better team efficiency. With more logic and fewer variables, the Flexitron afterloading platform optimizes the treatment delivery process and offers you a safe investment for today and in the future.

Oncentra Brachy treatment planning

With the Oncentra Brachy treatment planning system, the creation of highly conformal plans in an efficient workflow is within reach. The latest version of Oncentra Brachy offers a series of useful tools that facilitate many repetitive tasks for you such as contouring and reconstruction. Oncentra Brachy buys you time to focus on what matters: designing the optimal dose distribution.

When Oncentra Brachy treatment planning is used in combination with the new Flexitron afterloading platform, you will optimally benefit from a number of smart features that allow an easy, standardized way of treatment planning—while feeling confident about accurate and safe treatment delivery.

How to use this applicator guide

In this applicator guide, brachytherapy applicators are presented by body site. When a particular applicator can also be used for other body sites, a cross reference is given on the index page at the start of the relevant applicator section.

The applicators and optional items in this guide are designed for use with the Flexitron and microSelectron afterloaders only. Applicators and optional items specific to Flexitron or microSelectron are so indicated. Corresponding transfer tubes, x-ray catheters and CT and MRI markers per applicator and afterloader type can be found in the appendices.

Sterilization advice

Sterilization advice provided in this document is indicative and applies to newly purchased applicators. For more information regarding sterilization of a particular applicator, please consult the User Manual or Sterilization Advice Chart.

The contents of this document are subject to change without notice. All rights reserved. **Comments or questions may be directed to brachytherapy@elekta.com.**

Safety in the magnetic resonance environment

The symbols shown below are used to indicate safety of medical devices in the magnetic resonance environment.

MR safe: An item that poses no known hazards in all MR environments (1.5T, 3T, 6T and others).

MR conditional: An item that has been demonstrated to pose no known hazards in a specified MR environment with specified conditions of use (specified in the User Manual, typically compatible for 1.5T and 3T MR environment).

MR unsafe: An item that is known to pose hazards in all MRI environments.

Note:

Not all products in this guide are available in all markets. Please contact your local Elekta representative for more information.

Applicators as mentioned in this guide can be used with both Iridium-192 and Cobalt-60 afterloaders, except for the Valencia and Leipzig applicators.

If no information is provided under 'part number,' this item cannot be ordered separately.

This applicator user guide should only be considered as a overview for ordering information. For more details please refer to the latest version of each applicator's corresponding manual.

For the latest version of a specific manual, please contact your local sales representative.

References to literature are not included in this guide.

Advanced Gynecological Applicator-Venezia™

Reach cervix, parametrium and vagina—expanding clinical capabilities

Venezia allows you to reach beyond: access tumors in the parametrium and the vagina with ease. The Advanced Gynecological Applicator allows treatment of patients with IIIB cervical cancer, but also IB, IIA/B, IIIA and stage IVA tumors. One applicator can treat multiple tumor stages, so you can use the same applicator type for various patient groups. The two lunar-shaped ovoids form a ring when clicked together, allowing you to benefit from the advantages of a tandem and ovoid applicator in combination with the dose distribution of a ring—high dose to the target volume while sparing organs at risk.

Reproducible dosimetric results

The numbered hole positions on the Venezia ovoids and template facilitate consistent needle placement for every fraction—every time. Additionally, the insertion tool helps to insert the needles at the exact prescribed depth.

Venezia is included in the Oncentra® Brachy Applicator Modeling module, making reconstruction easy and fast. Simply select Venezia, then import and modify to meet clinical needs. Manual reconstruction becomes obsolete, saving time and streamlining workflow.

Simplify (interstitial) gynecological brachytherapy

Interstitial brachytherapy for advanced stage cervical cancer can be performed by free-hand needle placement. Although Venezia still allows free-hand needle placement, it is not necessary because the parallel and oblique needle holes in the ovoids and perineal template guide the needles to the desired location. In addition, the needle insertion tool enables the physician to advance the ovoid needles to the prescribed depth. This guided needle placement ensures reproducible dosimetric results, making needle placement easier and more accurate.

Venezia is much easier to insert and assemble than conventional gynecological applicators. Simply insert the first half of the applicator and attach the second half by sliding and clicking the two parts together. The applicator contains no screws and requires no tools, making applicator assembly and insertion an easy do-it-yourself task.

Easily integrate into the workflow

Venezia comes in various sizes to accommodate every patient's pelvic anatomy, for increased patient comfort. And, depending on the patient's indication, the physician can select vaginal and/or perineal needle insertion. The multipurpose applicator eliminates the need for a separate device for every indication.

Venezia suits all imaging modalities including ultrasound, CT, x-ray and MRI. For virtually any imaging workflow, Venezia will always be clearly visible in the image dataset.

Intended use:

- Cervix
- Endometrium

Why the Advanced Gynecological Applicator Venezia?

- Reach cervix, parametrium and vagina, expanding clinical capabilities
- Ensure reproducible dosimetric results
- Simplify (interstitial) gynecological brachytherapy
- Easily integrate into workflow

“With Venezia, I expect to treat advanced cervical cancer patients with more ease. Venezia will allow me to reach tumors extended to the parametrium because I can position needles at multiple angles, in the vagina and through the perineum.”

Petch Alisanant, MD

Division of Radiation Oncology
Chulalongkorn University
Bangkok, Thailand

MR

MR safe

Geneva™-Universal Gynecological Applicator

Easy to assemble and easy to insert, Geneva accommodates most female pelvic anatomies and is suitable for treating the majority of cervical cancer cases up to stage IIB.

Being MR compatible and having the option for guided interstitial brachytherapy with every configuration, Geneva provides unprecedented versatility without compromising ease of use and precision.

Adaptable for a diverse patient population

- Accommodates most female pelvic anatomies
- Provides interstitial option for post-hysterectomy cases
- Standardizes treatment for all cases up to stage IIB

Suitable for all cervical cancer patients up to stage IIB, Geneva is the universal gynecological applicator for every gynecological brachytherapy center.

With its modular design, Geneva can be configured to suit every female pelvic anatomy.

Interstitial option always available

Geneva ensures that the option for guided interstitial brachytherapy is always available, even with the smallest ovoids, for optimal target coverage.

The unique interstitial tube (I-tube) also enables clinicians to reach cancerous tissue around the vaginal cuff following hysterectomy. With ProGuide needles and guiding tube, the I-tube enhances accurate and reproducible dose distributions in hysterectomy patients and eliminates the need for free-hand needle placement.

Precise treatment planning and accurate dose delivery

- Supports all image-guided brachytherapy options, including IGABT
- Fixed geometry ensures rapid and accurate applicator modeling
- Allows easy applicator mapping every time

Geneva is completely MR compatible, offering distortion-free image guidance using all 2D and 3D imaging options. In addition, interstitial capability with every configuration supports the need for image guided adaptive brachytherapy (IGABT).

Click, ready

Geneva is quick and easy to assemble without the need for small screws or additional tools. Using the unique Elekta Clicking System, the applicator is ready for use in just four clicks, ensuring a faster workflow.

The modular design is completely adaptable to suit the users' needs and the innovative spreading clip allows flexibility for a wider reach, if required. The applicator clamp can be used to immobilize and stabilize the applicator once assembled.

Intended use:

- Cervix
- Endometrium

Note:

User manual 777.00610

- Geneva applicator is not yet CE registered in all countries.
- The registrations such as 510(k) and Health Canada will follow shortly.

Fletcher CT/MR Shielded Applicator

Combining the benefits of 3D imaging with ovoid shielding

During recent years, 3D image-guided brachytherapy using CT and MR imaging has steadily replaced x-ray-based dose planning. Visualization of the targeted area and untargeted anatomies enables conformation of the dose distribution to the target volume and dose reduction to organs at risk. Sparing of the organs at risk was traditionally accomplished by the use of shielded ovoids. However, the metal components of such ovoids interfere with modern 3D-imaging modalities and distort acquired images.

The Fletcher CT/MR shielded applicator is the first of its kind to overcome these issues. Moveable shielding incorporated in the ovoids allows you to lower the dose to organs at risk during gynecological brachytherapy treatments. High-quality CT and MR images for 3D dose planning can now be combined with protection of the organs at risk.

Intended for:

- Cervix
- Endometrium

Note:

- Includes unique moveable shielding mechanism
- MR conditional (up to 3 Tesla)
- This applicator can be sterilized using plasma sterilization (STERRAD®)
- User manual 777.00157
- The most accurate dose effect of the shields in your plans can be calculated with ACE (TG-186) in Oncentra Brachy, for Iridium-192 source. Oncentra also provides a shield approximation that can be used for TG-43 calculations for Iridium-192.

Why the Fletcher CT/MR shielded applicator?

- High dose to target combined with significant protection of organs at risk
- Minimize image artifacts with moveable shields
- Maximum workflow efficiency with Oncentra Brachy planning tools

MR unsafe

Fletcher Williamson Applicator

This applicator is based on the dosimetry of the conventional shielded Fletcher-style applicator. A lightweight tungsten alloy shielding is incorporated in the ovoid tubes to reduce the dose to the bladder and rectum. Ovoids are positioned at a 60° angle to the vaginal axis. The set includes mini ovoids for narrow vaginas and thin 3.2 mm intrauterine tubes.

A specific Fletcher Williamson 'Asia Pacific' applicator set is available, which is unshielded and has small geometry ovoids.

Intended for:

- Cervix
- Endometrium

Note:

- The applicator can be sterilized using steam sterilization
- User manual 090.604

Why the Fletcher Williamson applicator?

- Embedded shielding reduces dose to critical organs

“The Fletcher Williamson applicator is a well-crafted, precision instrument with bladder and rectal shielding. This instrument allows us to continue a quality technical approach to gynecological brachytherapy with High Dose Rate brachytherapy.”

J. Stitt, MD

University of Wisconsin, Madison
United States

Ring CT/MR Applicator

The optimal solution for volume-based intracavitary cervical brachytherapy

The ring CT/MR applicator uses the ring to create a pear-shaped dose to match the anatomy of the cervix and endometrium.

The applicator uses strong fiber composite tubing and can be used in combination with CT and MR imaging for volume-based treatment planning. The fixed geometry of the ring and the intrauterine tube provide a reproducible applicator geometry. With the use of the Applicator Modeling module in Oncentra Brachy, reconstruction of the applicator takes only a few mouse clicks.

Intended for:

- Cervix
- Endometrium

Note:

- This applicator can be sterilized using steam sterilization and ethylene oxide
- User manual 090.617

101055	Rectal retractor, 45°
101012	Sterilizing caps CT/MR (pack of 50)

Ring CT/MR applicator set, 6 mm, 60°, part # 101062

Part number	Description
101048	Ring tube, d = 26 mm, 60°
101049	Ring tube, d = 30 mm, 60°
101051	Intrauterine tube, l = 20 mm, 60°
101052	Intrauterine tube, l = 40 mm, 60°
101053	Intrauterine tube, l = 60 mm, 60°
101057	Rectal retractor, 60°
101012	Sterilizing caps CT/MR (pack of 50)

Optional items

Part number	Description
189566* ●	Smit Sleeve CT/MR (l = 40 mm, d = 9 mm)
101054	Perineal bar (for part # 101060/061/062)
101038	Ring tube, d = 34 mm, 30° (for part # 101060)
101044	Ring tube, d = 34 mm, 45° (for part # 101061)
101050	Ring tube, d = 34 mm, 60° (for part # 101062)
110303/304/ 305/306/307	Intrauterine tube, d = 4 mm, l = 40 30°/45°/60°
101015	CT/MR sterilization box
110290	MR line marker set

Consumables information

Single use, delivered sterile

Why the ring CT/MR applicator?

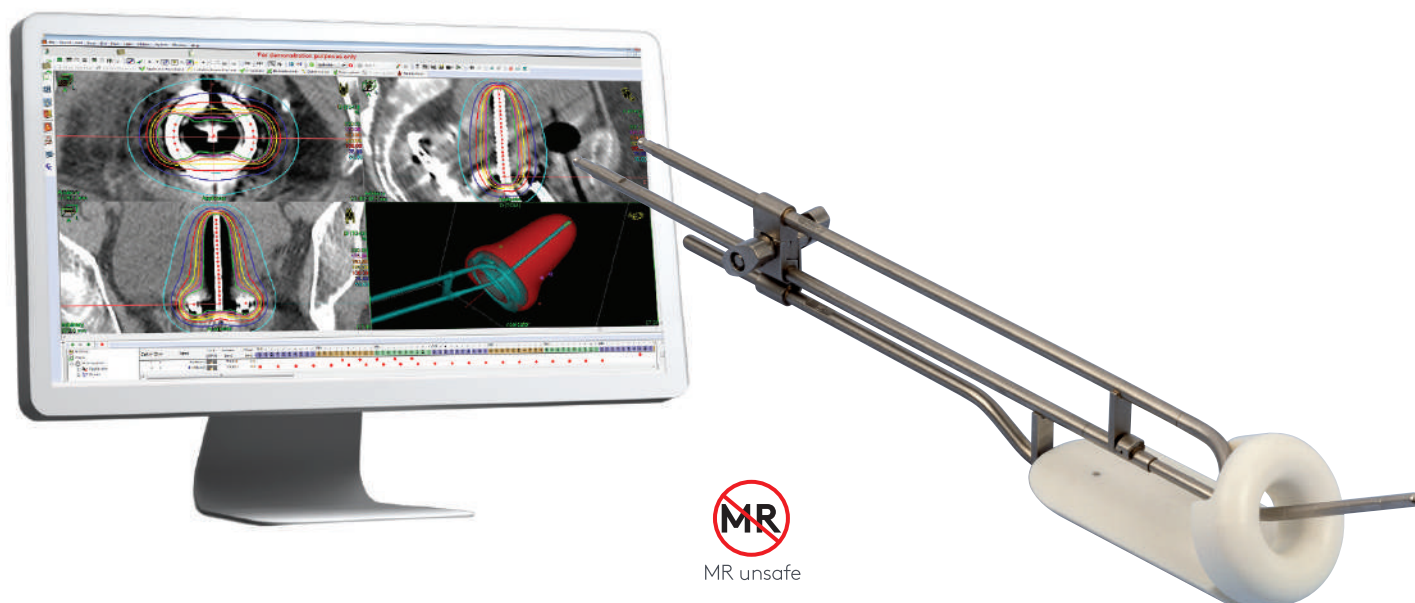

- Ideal for volume-based intracavitary cervical brachytherapy
- Reproducible geometry
- Compatible with CT, and MR safe

“We use the ring applicator to match the dosimetry of the Stockholm box.”

T.H. Knocke, MD

Universitätsklinik für Strahlentherapie,
Wien Austria

*For more options, refer to the Optional items section, page 108

MR unsafe

Ring Applicator

The ring applicator uses the ring to create a pear-shaped dose. This proven dosimetry shape matches the anatomy of the cervix and endometrium. A rectal retractor can be used to push the rectal/vaginal wall to a fixed distance from the source.

Intended for:

- Cervix
- Endometrium

Note:

- The applicator can be sterilized using steam sterilization and ethylene oxide
- User manual 090.610

Order information

Complete ring applicator set, part # 084050

Part number	Description
085095	Ring tube, 30° (for set # 085095)
085096	Ring tube, 45° (for set # 085096)
085097	Ring tube, 60° (for set # 085097)
084072	Perineal bar
084056	Ring tube, d = 34 mm, 30°
084055	Ring tube, d = 34 mm, 45°
084054	Ring tube, d = 34 mm, 60°
084051	Ring cap, d = 34 mm

Ring applicator set 30°, part # 085095

Part number	Description
084062	Ring tube, d = 26 mm, 30°
084059	Ring tube, d = 30 mm, 30°
084065	Intrauterine tube, l = 20 mm, 30°
084064	Intrauterine tube, l = 40 mm, 30°
084063	Intrauterine tube, l = 60 mm, 30°
084316	Rectal retractor, 30°
084053	Ring cap, d = 26 mm
084052	Ring cap, d = 30 mm
084158	Sterilizing caps, 3.2 mm (50 pcs)

Ring applicator set 45°, part # 085096

Part number	Description
084061	Ring tube, d = 26 mm, 45°
084058	Ring tube, d = 30 mm, 45°
084068	Intrauterine tube, l = 20 mm, 45°
084067	Intrauterine tube, l = 40 mm, 45°
084066	Intrauterine tube, l = 60 mm, 45°
084335	Rectal retractor, 45°
084053	Ring cap, d = 26 mm
084052	Ring cap, d = 30 mm
084158	Sterilizing caps, 3.2 mm (50 pcs)

Ring applicator set 60°, part # 085097

Part number	Description
084060	Ring tube, d = 26 mm, 60°
084057	Ring tube, d = 30 mm, 60°
084071	Intrauterine tube, l = 20 mm, 60°
084070	Intrauterine tube, l = 40 mm, 60°
084069	Intrauterine tube, l = 60 mm, 60°
084319	Rectal retractor, 60°
084053	Ring cap, d = 26 mm
084052	Ring cap, d = 30 mm
084158	Sterilizing caps, 3.2 mm (50 pcs)

Optional items

Part number	Description
084051	Ring cap, d = 34 mm
084056	Ring tube, d = 34 mm, 30° (requires part # 085095)
084055	Ring tube, d = 34 mm, 45° (requires part # 085096)
084054	Ring tube, d = 34 mm, 60° (requires part # 085097)
084072	Perineal bar (already included in part # 084050)
084078	Intrauterine tube, l = 20 mm, 90°
084077	Intrauterine tube, l = 40 mm, 90°
084076	Intrauterine tube, l = 60 mm, 90°
084338	Rectal retractor, 90°
101015	CT/MR sterilization box
189676 and following* ●	Smit Sleeves CT/MR for 4 mm intrauterine tube, l = 20 mm and longer, d = 6 mm (box of 10)

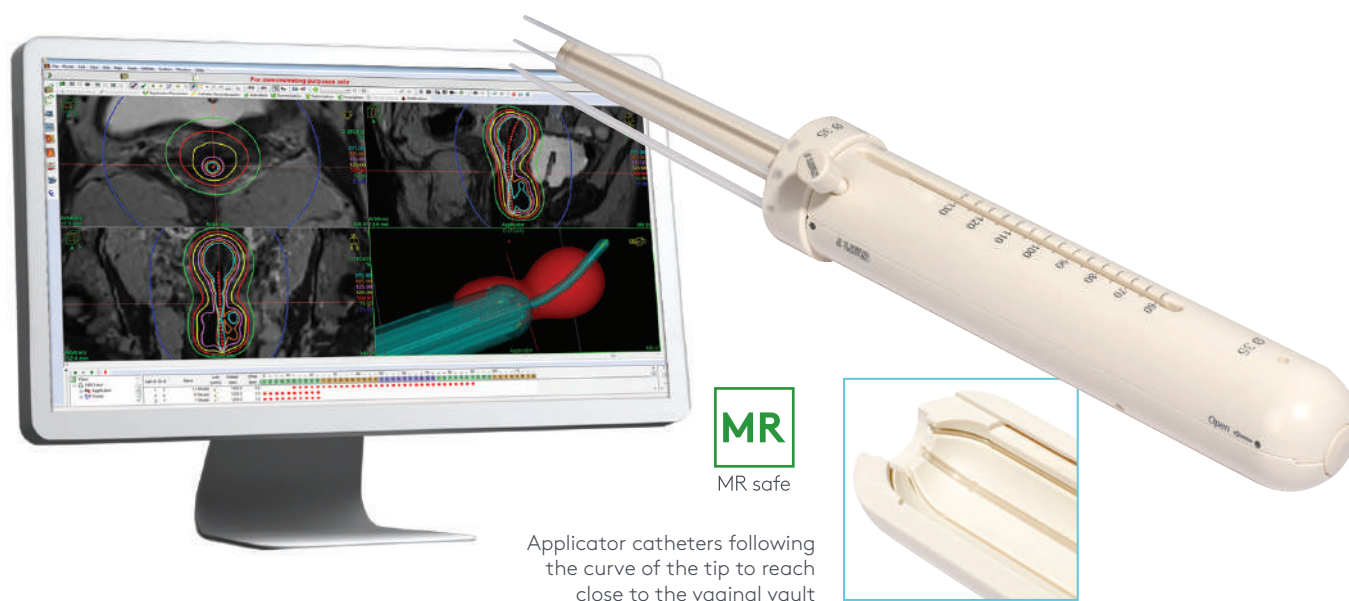

Consumables information

Single use, delivered sterile

Why the ring applicator?

- Reproducible applicator geometry
- Straightforward insertion and planning

Vaginal CT/MR Multi Channel Applicator

The precise dose delivery solution for vaginal brachytherapy

Bringing the right dose to the right place is critical in successful vaginal brachytherapy. The vaginal CT/MR multi channel applicator has been specifically designed for gynecologic brachytherapy to provide accurate target coverage and maximum conformity for gynecologic malignancies.

Reach where it matters most

The vaginal CT/MR multi channel applicator features a unique design incorporating channels that follow the curve of the applicator tip. This brings the dosimetry measurably closer to the vaginal vault, allowing you to reliably and more effectively cover the planning target volume.

Unique treatment precision

The channels, located immediately underneath the surface of the applicator, provide high accuracy and optimized treatment precision, while tailoring the dose to the target and saving surrounding organs at risk such as the bowel and bladder.

Practical design

The applicator is easy to assemble, clean and sterilize. It seamlessly integrates with Oncentra Brachy, which significantly improves the speed of planning and ensures precise and reproducible placement of the applicator. For quick and accurate treatment planning based on MRI, the applicator's geometry is incorporated in the Applicator Modeling functionality of Oncentra Brachy. The compatibility with Oncentra Brachy offers a unique solution for vaginal brachytherapy, combining precision with speed.

Intended for:

- Vagina
- Cervix
- Endometrium

Note:

- The center of the surface channels is located 5 mm underneath the cylinder surface
- The applicator can be sterilized using steam sterilization
- User manual for applicator 777.00171
- User manual for catheters 777.00172

Order information

Vaginal CT/MR multi channel applicator set, part # 110750

Part number	Description
101002	Intravaginal tube
110752	Set of cylinder components, Ø 25 mm (features 6 surface channels)
110756	Set of cylinder components, Ø 30 mm (features 8 surface channels)
110761	Set of cylinder components, Ø 35 mm (features 8 surface channels)
101012	Sterilizing caps CT/MR (pack of 50)

Optional items

Part number	Description
110800* ●	Catheter set with collar 6F x 293 mm (delivered sterile and for single use only)
110766	Set of cylinder components, Ø 40 mm (features 10 surface channels)
101003	Intrauterine tube 15°, l = 40 mm, Ø 6 mm
101004	Intrauterine tube 30°, l = 60 mm, Ø 6 mm
101005	Intrauterine tube 45°, l = 80 mm, Ø 6 mm
110787**	CT expansion set, featuring thin titanium intrauterine tubes l = 40, 60 and 80 mm
110773	Perineal bar set
110774	Perineal bar ventral
110776	Perineal bar dorsal
110779	Perineal bar lever
110771	Set of fixations screws (5 pcs)
110778	Applicator clamp adapter set
101015	CT/MR sterilization box
101069	IU3 x-ray marker for central tandem for microSelectron
110404	IU3 x-ray marker for central tandem for Flexitron

Consumables information

Single use, delivered sterile

*Required for use

**When using titanium intrauterine tubes the applicator is MR unsafe

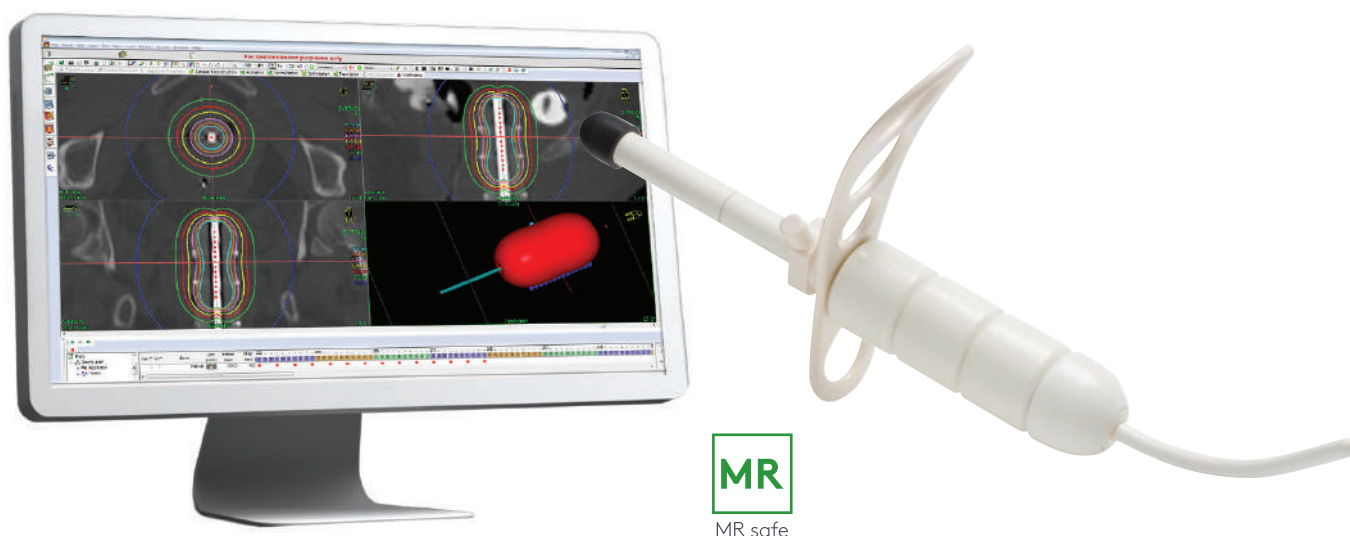

Why the vaginal CT/MR multi channel applicator?

- Reach where it matters most
- Unique treatment precision
- Practical design
- MR safe; artifact-free images

“The vaginal CT/MR multi channel applicator allows me to get the exact target coverage I planned and gives me confidence in conformity in the treatment of my gynecologic cancer patients.”

B.R. Pieters, MD, PhD

Head of Brachytherapy Department
Academic Medical Centre (AMC),
Amsterdam
The Netherlands

Vaginal CT/MR Applicator

The vaginal CT/MR applicator is designed for treatment of the vaginal cuff. This easy-to-use applicator is available in different cylinder diameters to reduce the surface dose. By varying the number of segments of the cylinder, the length of the cylinder can be adapted to clinical needs. The non-metallic materials of the applicator support its use in combination with CT and MR imaging modalities.

Intended for:

- Vagina
- Cervix
- Endometrium
- Rectum

Note:

- The most accurate dose effect of the shields in your plans can be calculated with Oncentra Brachy ACE (TG-186) for both Iridium-192 and Cobalt-60 sources. Oncentra Brachy also provides a shield approximation that can be used for TG-43 calculations for Iridium-192
- This applicator can be sterilized using steam sterilization
- User manual 090.612

Order information

Complete set, part # 101001

Part number	Description
101002	Intravaginal tube
101003	Intrauterine tube 15°, l = 40 mm, Ø 6 mm
101004	Intrauterine tube 30°, l = 60 mm, Ø 6 mm
101005	Intrauterine tube 45°, l = 80 mm, Ø 6 mm
101007	Set of 4 cylinders, 20 mm
101008	Set of 4 cylinders, 25 mm
101009	Set of 4 cylinders, 30 mm
101010	Set of 4 cylinders, 35 mm
101006	Cylinder fixation
101013	Perineal bar
101012	Sterilizing caps CT/MR (pack of 50)

Optional items

Part number	Description
101011	Set of 4 cylinders, 40 mm
189566* ●	Smit Sleeve CT/MR (l = 40 mm, d = 9 mm)
101015	CT/MR sterilization box
101149	Knob PPSU (minimum order quantity is 5 pcs)

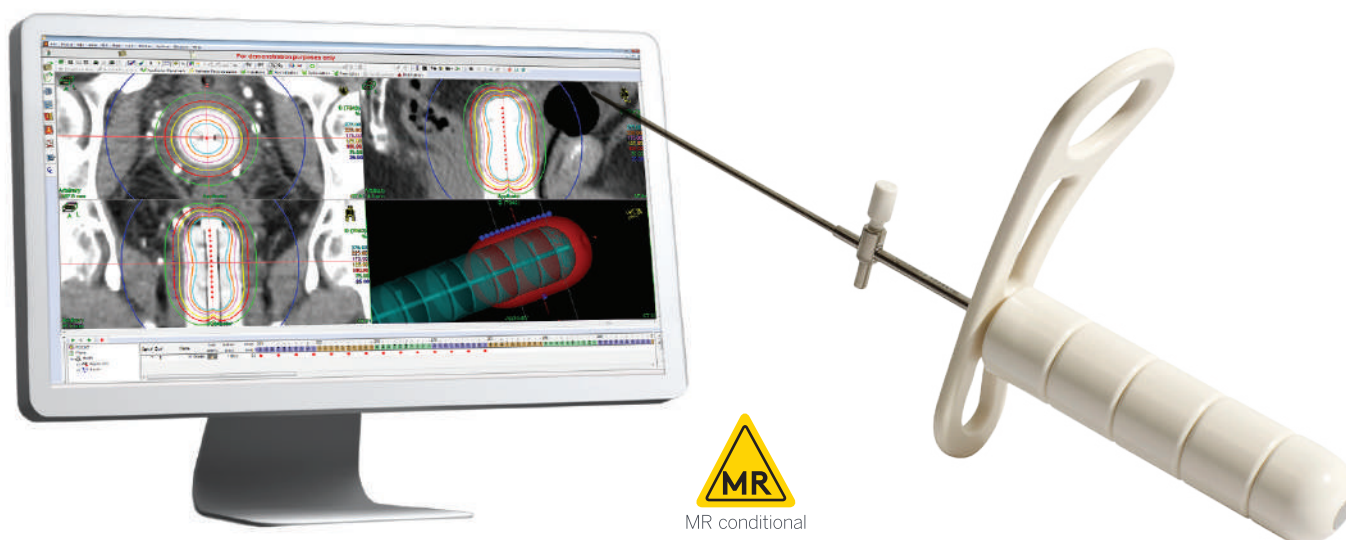

Consumables information

Single use, delivered sterile

Why the vaginal CT/MR applicator?

- Reproducible dosimetry
- Easily adaptable to patient anatomy
- CT and MR compatible

*For more options, refer to the Optional items section, page 108

Vaginal Cylinder Applicator Titanium

The vaginal cylinder applicator titanium (Ti) is an easy solution for intracavitary vaginal treatments. When used with an intrauterine tube, the applicator also offers a simple solution for treatment of the cervix, rectum or endometrium. The embedded titanium markers in the cylinder segments support visualization of the inserted applicator while minimizing contamination risk. The set is available in a range of different diameters and curvatures of the intrauterine tube to provide individually optimized treatment options and dose distribution.

Intended for:

- Vagina
- Cervix
- Endometrium
- Rectum

Note:

- Compatible with CT and MR (1.5T and 3T)
- The applicator can be sterilized using steam sterilization
- User manual 777.00282

Order information

Vaginal cylinder applicator set Ti, part # 137400

Part number	Description
137194	Cylinder set, d = 20 mm
137195	Cylinder set, d = 25 mm
137196	Cylinder set, d = 30 mm
137416	Intra-vaginal applicator tube (Ti)
137402	Intra-vaginal/intrauterine tube, 40 mm (Ti)
137403	Intra-vaginal/intrauterine tube, 60 mm (Ti)
137404	Intra-vaginal/intrauterine tube, 80 mm (Ti)
137401	Perineal bar 1
137415	Spring lock tube (Ti)
137570	Closing caps (25 pcs)

Optional items

Part number	Description
101149	Knob PPSU
137197	Cylinder set, d = 15 mm
137198	Cylinder set, d = 35 mm
137199	Cylinder set, d = 40 mm
101015	CT/MR sterilization box
189677/679/682* ●	Smit Sleeve

Consumables information

Single use, delivered sterile

Why the vaginal cylinder applicator titanium?

- Embedded markers for easy identification on images
- Strong and lightweight
- Compatible with CT and MR

*For more options, refer to the Optional items section, page 108

Adjustable Cervix Applicator

The adjustable cervix applicator for intracavitary treatment is very user-friendly. The cylinders are available in different diameters to adapt to patient anatomy, optimize dose distribution and reduce the mucosal dose. The intrauterine tube is available in three curvatures with different lengths. Conjointly, this gives a versatile applicator for cervical, uterine, vaginal and rectal cancer treatment.

Intended for:

- Cervix
- Endometrium
- Vagina
- Rectum

Note:

- User manual 090.611
- Sterilization Advice Chart: 094.331

Order information

Adjustable cervix applicator set, part # 084450

Part number	Description
084455	Intrauterine tube, straight
084456	Intrauterine tube, angle 15°
084457	Intrauterine tube, angle 30°
084451	Cylinder, d = 20 mm, with marker
084452	Cylinder, d = 25 mm, with marker
084453	Cylinder, d = 30 mm, with marker
084454	Cylinder, d = 35 mm, with marker
084158	Sterilizing caps, 3.2 mm (pack of 50)
101015	CT/MR sterilization box

Why the adjustable cervix applicator?

- User-friendly applicator
- Designed for treatment of the cervix, endometrium, vagina and rectum

Shielded Cylindrical Applicator

The shielded cylindrical applicator is designed for intracavitary treatments in which partial shielding is required to reduce the dose to critical organs. The shielding positions can be defined by the user through the use of tungsten alloy segments with different shielding angles. Markers indicate the position of the shielding. The effect of the shielding components can be modeled in Oncentra Brachy treatment planning software.

Intended for:

- Vagina
- Rectum

Note:

- This applicator can be sterilized using steam sterilization
- The most accurate dose effect of the shields in your plans can be calculated with Oncentra Brachy ACE (TG-186) for both Iridium-192 and Cobalt-60 sources. Oncentra Brachy also provides a shield approximation that can be used for TG-43 calculations for Iridium-192
- User manual 090.609

Order information

Shielded cylindrical applicator set, part # 084320

Quantity	Part number	Description
1	084321	Central tube
1	084329	Tungsten shielding, 180°
2	084328	Tungsten shielding, 90°
1	084322	Cylinder, d = 25 mm
1	084323	Cylinder, d = 30 mm
1	084324	Cylinder, d = 35 mm
1	084325	Cylinder, d = 40 mm
1	084327	Fixing nut
1	084158	Sterilizing caps, 3.2 mm (50 pcs)

Optional items

Part number	Description
084348	Plastic filler, 90° geometry
084349	Plastic filler, 180° geometry
101015	CT/MR sterilization box

Why the shielded cylindrical applicator?

- Shielded segments for partial dose reduction to organs at risk
- Integrated markers for reconstruction of shielding on images

Miami Vaginal Applicator

The Miami vaginal applicator was developed in cooperation with the University of Miami. The applicator contains six lateral tubes, which are equally spaced around the surface of the cylinder for optimized treatment.

A central tube and different intrauterine tubes expand the possible treatment options. Three different curvatures of intrauterine tubes are included and adjust to the uterine length. The vaginal cylinder is 30 mm in diameter with cylinder sleeves of 35 mm and 40 mm. This enables versatility in the treatment of vaginal, cervical, uterine and rectal carcinomas.

Intended for:

- Vagina
- Cervix
- Endometrium
- Rectum

Note:

- The applicator can be sterilized using ethylene oxide or using steam sterilization (except for Awllen key screwdriver)
- User manual 090.601

Order information

Miami vaginal applicator set, part # 085210

Part number	Description
085211	Central tube
084455	Intrauterine tube, straight
084456	Intrauterine tube, 15°
084457	Intrauterine tube, 30°
085212	Cylinder, d = 30 mm, with marker
085213	Cylinder sleeve, d = 35 mm
085214	Cylinder sleeve, d = 40 mm
085218	Cone insert
006182	Screwdriver
598027	Allen key screwdriver 3 mm
083147	Sterilizing caps, 1.9 mm (50 pcs)
084158	Sterilizing caps, 3.2 mm (50 pcs)

Optional items

Part number	Description
101015	CT/MR sterilization box
189676 and following* ●	Smit Sleeves CT/MR for 4 mm intrauterine tube, l = 20 mm and longer, d = 6 mm (box of 10)

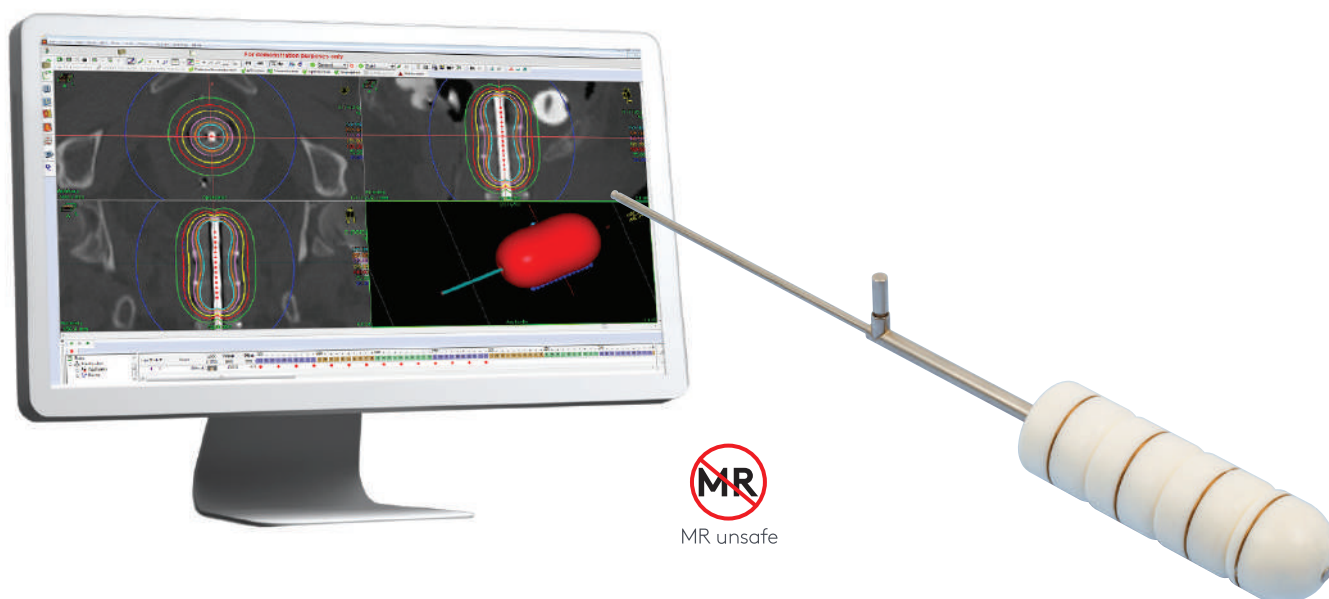

Consumables information

Single use, delivered sterile

Why the Miami vaginal applicator?

- Multiple surface channels for dose optimization

*For more options, refer to the Optional items section, page 108

Vaginal Applicator

The Vaginal applicator for intracavitary treatment is very user-friendly. The set is available with three different lengths and curvatures of the intrauterine tube to provide additional treatment options. The cylinders are available in different diameters to optimize the dose distribution and reduce the mucosal dose.

The vaginal applicator can be used to treat vaginal cuff, cervix, rectum or endometrium when used with an intrauterine tube.

Intended for:

- Vagina
- Cervix
- Endometrium
- Rectum

Note:

- The applicator can be sterilized using steam sterilization and ethylene oxide
- User manual 090.606

Order information

Vaginal applicator set, part # 084350

Part number	Description
084002	Vaginal tube
084003	Intrauterine tube, l = 40 mm, 15°
084004	Intrauterine tube, l = 60 mm, 30°
084005	Intrauterine tube, l = 80 mm, 45°
084010	Cylinder locking pipe
084351	4 cylinder parts, d = 20 mm, with marker
084352	4 cylinder parts, d = 25 mm, with marker
084353	4 cylinder parts, d = 30 mm, with marker
084354	4 cylinder parts, d = 35 mm, with marker
084158	Sterilizing caps, 3.2 mm (50 pcs)

Optional items

Part number	Description
084008	Perineal bar
084919	Fixing nut (for perineal bar)
084009	Cervical stopper
084355	4 cylinder parts, d = 40 mm with marker
101149	Knob PSU
189676 and following* ●	Smit Sleeves CT/MR for 4 mm intrauterine tube, l = 20 mm and longer, d = 6 mm (box of 10)
101015	CT/MR sterilization box

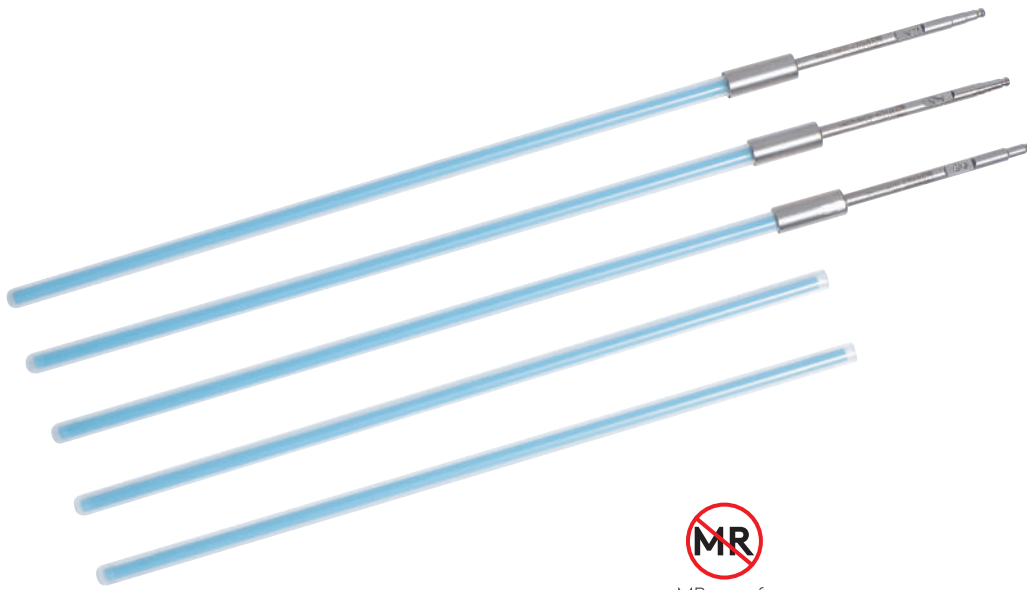

Consumables information

Single use, delivered sterile

Why the vaginal applicator?

- Reproducible dosimetry
- Easily adaptable to patient geometry

MR unsafe

Vaginal Mold Applicator

The vaginal mold applicator was developed in close cooperation with Center Oscar Lambret in Lille, France. It enables the user to apply the French “moulage,” or Institut Gustave Roussy technique for afterloading. The aim of this method is a personalized mold for irradiation with precise dose distribution and good patient tolerance. The set consists of three mechanically coded, stainless steel channel assemblies, which can be easily connected to the flexible vaginal mold tubes. These are embedded in the customized mold.

Intended for:

- Vagina
- Cervix

Note:

- The vaginal mold channel assemblies are reusable, and can be sterilized using steam sterilization and ethylene oxide
- The vaginal mold tubes are for single use only, and can be sterilized using ethylene oxide before use
- User manual 090.708

Order information

Vaginal mold applicator set, part # 189018

Part number	Description
189020	Vaginal mold channel 1 assembly
189021	Vaginal mold channel 2 assembly
189022	Vaginal mold channel 3 assembly
189019 ●	Vaginal mold tubes set (30 pcs)
084158	Sterilizing caps (50 pcs)

Consumables information

Single use, delivered sterile

Why the vaginal mold applicator?

- Tailored irradiation
- Precise dose distribution

Rotte Endometrial Applicator

The Rotte endometrial applicator (or Rotte “Y” applicator) has been developed with Professor K. Rotte of the Universitäts-Frauenklinik, Würzburg, Germany, and is specifically designed for High Dose Rate treatment of the endometrium. The applicator is easy to insert, using two opposed intrauterine tubes. The intrauterine tubes can be locked into position with a single action. Once locked, the applicator has a fixed geometry, which provides excellent reproducibility of the dose distribution.

Intended for:

- Endometrium

Note:

- Excellent reproducibility of dose distribution
- Straightforward workflow
- Designed for reuse
- User manual 090.620
- Sterilization advice chart: 090.620

Order information

Basic Rotte applicator set, 32 mm, part # 084230

Part number	Description
084231	Applicator tube 1, right uterus
084232	Applicator tube 2, left uterus
084158	Sterilizing caps, 3.2 mm (50 pcs)

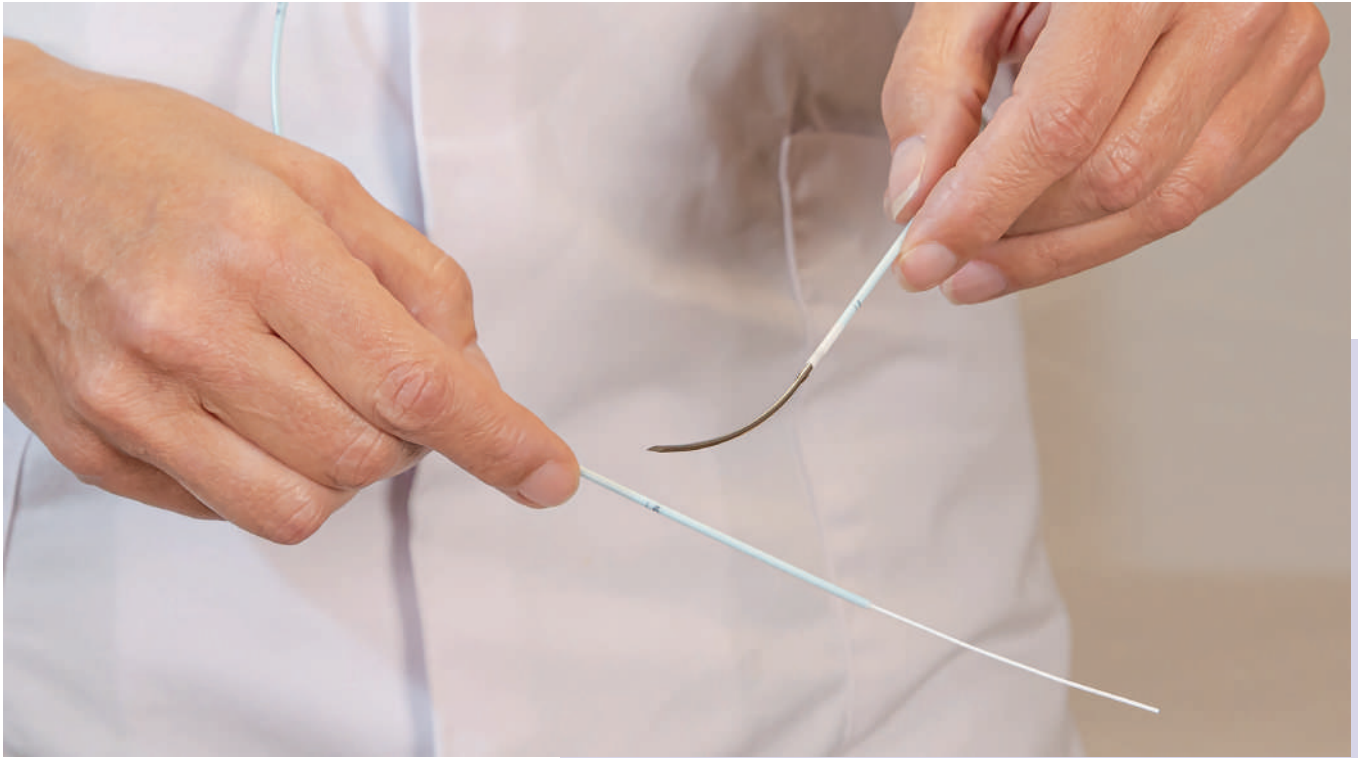

Complete set, part # 084434

Part number	Description
084435	Basic Rotte applicator set, 20 mm
084230	Basic Rotte applicator set, 32 mm
084436	Basic Rotte applicator set, 40 mm
084437	Basic Rotte applicator set, 50 mm
084158	Sterilizing caps, 3.2 mm (50 pcs)

Why the Rotte endometrial applicator?

- Dedicated for use in the endometrium
- Easy to insert
- Excellent reproducibility

Luneray® Catheter

Brachytherapy is a well-known treatment for certain types of bladder cancer, with good clinical outcome. A key advantage of brachytherapy is the potential to spare the bladder, which improves the quality of life for the patient. A hurdle for the adoption of bladder brachytherapy, however, has been the invasiveness and complexity of the procedure.

Luneray overcomes this barrier by offering a unique system of an integrated catheter and needle, designed to enable laparoscopic, minimally invasive bladder brachytherapy procedures.

Unique catheter/needle system

Luneray combines a flexible catheter with a curved needle, which enables minimally invasive catheter placement.

Precise catheter placement

Luneray's state-of-the-art curved needle design allows for optimal maneuverability and precise catheter placement for accurately targeted bladder brachytherapy procedures. The catheter is made of exclusive material and compiled with fill-wire, offering unsurpassed kink resistance.

Enables organ-sparing, laparoscopic procedures

Luneray is designed to enable minimally invasive access to the bladder. Minimally invasive procedures are associated with quick recovery and fewer complications, supporting a patient-friendly treatment.

Intended for:

Interstitial brachytherapy of soft tissue that allows the insertion of this flexible applicator, for example:

- Abdominal structures/organs (e.g. urinary bladder)
- Head and neck (e.g. ear, lip, nose, tongue, oral mucosa)
- Skin (e.g. keloids)
- Soft tissue sarcoma

Note:

- Each package holds five identical, pre-assembled needle/catheter products, single packed in a double pouch
- Radio-opaque buttons to fixate the catheter after insertion. Available in seven colors
- Imaging for treatment planning and verification by way of x-ray, CT and MR
- Centimeter marks: every 5 cm (line and number)
- Detailed marking in the center of the catheter to assist accurate catheter placement: 1 cm increments between 20-22 cm and 28-30 cm
- Manual number 777.00293

* The Luneray catheter is MR safe when the needle is removed as described in the user manual.

- Luneray: MR unsafe
- Luneray Needle: MR unsafe
- Luneray Catheter: MR safe

Why the Luneray catheter?

- Unique catheter/needle system enables minimally invasive catheter placement
- State-of-the-art needle design for optimal maneuverability and precise placement
- Enables organ-sparing laparoscopic procedures, supporting a patient-friendly treatment and quick recovery

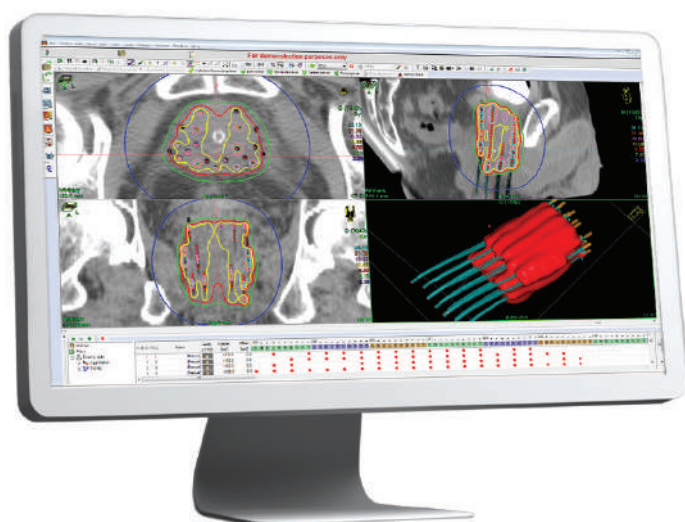

“The Luneray catheter creates new opportunities to treat select bladder cancers in a minimally invasive way.”

Martinez with RTP and AccuSeed template holder

Martinez Prostate Template

The Martinez brachytherapy prostate template has been designed to assist in enhancing precision. The ultra-light template locks to the stepper or stabilizer during insertion and guides needles under ultrasound imaging. The needles can be individually repositioned and locked for treatment. The individual locking insert ensures that the position of each needle will remain unchanged when adjusting another needle.

Part of the real-time prostate brachytherapy solution

Elekta's real-time prostate brachytherapy solutions were developed with one goal in mind: to offer a real-time workflow for HDR and LDR prostate brachytherapy in which the treatment is, or can be, provided in a single session. The integration of all components in one prostate brachytherapy solution ensures that products interact seamlessly. With a design leading to highly conformal and uniform prostate brachytherapy treatment plans, users can be sure that clinical objectives are met in the most efficient and dedicated way.

Intended for:

- Assisting interstitial brachytherapy of the prostate gland

Note:

- The template can be sterilized using steam sterilization
- User manual 777.00117

*Non-clinical testing demonstrated that the Martinez prostate template is MR conditional. A patient can be scanned safely, immediately after placement under the following conditions:

- Static magnetic field of 1.5 Tesla or 3 Tesla
- Maximum spatial gradient magnetic field of 720 gauss/cm
- Maximum MR system reported, whole body averaged specific absorption rate (SAR) of 2 W/kg for 15 minutes of scanning (i.e. per pulse sequence)

Order information

Martinez prostate template set, part # 137280

Part number	Description
137281	Martinez prostate template
137290	Needle lock tool
137285	Template fixation pin set

Optional items

Part number	Description
137286 ●	Lock inserts set for 5F plastic needles (20 pcs)
137287 ●	Lock inserts set for 6F plastic needles (20 pcs)
137289 ●	Lock inserts set for 1.5 mm metal needles (20 pcs)
137290	Needle lock tool
137282	Template holder for RTP stepper
137283	Template holder for Accuseed stepper
137284	Template holder for D & K & Civco classic Accucare stepper
137949	Template holder for OncoSelect stepper Material aluminum/stainless steel

Single use, delivered non-sterile

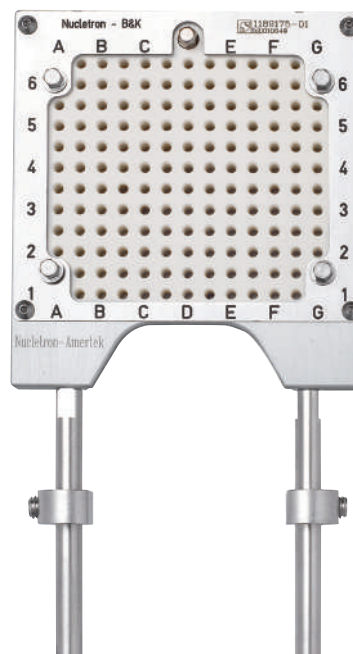

**See section Needles and Flexible Implant Tubes, page 82

Why the Martinez prostate template?

- Small, ultra-light template
- Individual needle locks for various needle sizes
- Quick implant removal
- Can be used with a stepper or free-hand technique

MR unsafe

Prostate Stepper Template

The prostate stepper template is an excellent solution for applying interstitial techniques in HDR prostate treatments. It is placed in a stepper holder, which is available for various ultrasound stepper devices.

Convenient design supporting a variety of needles

The prostate stepper template is designed for guidance and fixation of OncoSmart ProGuide plastic needles in sizes 5F and 6F. This square light-weight template has a universal 5 mm grid array and a single-action locking system that locks all implanted needles in a single movement. The single-action locking system accelerates the procedure and is designed to eliminate inadvertent movement of individual needles. Optional grid face plates for the template correspond with the grid of the ultrasound system used, such as GE/Siemens and B&K ultrasound systems. Grid face plates help determine the correct needle position with use of the ultrasound image, and can be mounted on the template itself or on the stepper holder.

Part of the real-time prostate brachytherapy solution

Elekta's real-time prostate brachytherapy solutions were developed with one goal in mind: to offer a real-time workflow for HDR and LDR prostate brachytherapy, in which the treatment is, or can be, provided in a single session. The integration of all components in one prostate brachytherapy solution ensures that products interact seamlessly. With a design leading to highly conformal and uniform prostate brachytherapy treatment plans, users can be sure that clinical objectives are met in the most efficient and dedicated way.

The prostate stepper template is best used in combination with ProGuide needles and OncoSelect stepper and 1.9 mm stainless steel needles.

Intended for:

- Prostate
- Vagina
- Perineum
- Rectum

Note:

- Holder and grid face plates need to be ordered separately
- User manual 090.699

Martinez Universal Perineal Interstitial Template (MUPIT) Applicator

The MUPIT applicator is designed for interstitial placement of needles (1.5 mm or 1.9 mm) to treat cancer in the perineum, rectum or vagina. The periphery of the template has angled holes for the needles to reach the widest tumor spread. Rectal and vaginal cylinders are included to provide better template stability and additional treatment options.

Intended for:

- Perineum
- Rectum
- Vagina

Note:

- Only metal needles (Ø 1.5 or 1.9 mm) can be used with these sets. ProGuide needles cannot be used
- The applicator can be sterilized using steam sterilization or ethylene oxide
- User manual 090.629

Order information

1	089025	045303	Needle stopper (4 x 10 pcs)
2	045455		Fixing screw, for 045449

Why the MUPIT applicator?

- Easy-to-use template for a variety of bodysite treatments
- Needle placement provides dose optimization to the area of interest

Intracavitary Mold Applicator

Enhanced conformal dose delivery in intracavitary brachytherapy

Brachytherapy offers an exciting opportunity for tailored coverage of the treatment target in intracavitary treatments such as endorectal brachytherapy. The intracavitary mold enables a highly conformal intracavitary solution that facilitates short treatment times.

Co-developed with leading specialists

The intracavitary mold has been developed in the context of the High Dose Rate endorectal brachytherapy (HDREBT) protocol of the McGill University Health Center in Montreal, Canada, aimed at tumor downgrading and down-staging before (neo-adjuvant) surgery.

Effective, comfortable and efficient

The intracavitary mold has been designed to tailor the dose to asymmetrically located tumors in anatomical cavities. Its flexible cylinder material can be bent gently during insertion to minimize patient discomfort while it optimizes conformal target coverage.

Eight radially spaced treatment catheters, placed just under the cylinder surface, can be differentially loaded on a slice-by-slice basis along the entire tumor length to ensure tailored target coverage that spares uninvolved tissue.

The central opening in the applicator can accommodate an optional central treatment catheter. Alternatively, the central opening can be used to insert shielding solutions provided by the user.

Intended for:

- Rectum

Note:

- The intracavitary molds are single-packed and for single use only
- Kink protection sets are packed separately (5 sets per box)
- The reusable parts of this applicator can be sterilized using steam sterilization (at 134°C/273°F)
- User manual 090.705

Breast CT/MR Template

Always the right breast template for your patient

The advanced breast CT/MR template smoothly guides needles for multicatheter implants. The template's lightweight design supports patient comfort. Levers allow easy assembly and placement of the templates for treatment. The non-metallic materials enable template use in combination with CT and MR imaging.

Convenience through preconfigured templates

A range of preconfigured templates is included in the set, offering the best choice for a particular implant. Each of these template configurations provides a dose distribution according to the Paris dosimetry system.

Intended for:

- Interstitial breast brachytherapy

Note:

- CT and MR compatible (all field strengths)
- The breast CT/MR template can be sterilized using steam sterilization
- User manual 777.00141

Kuske Breast Applicator

The Kuske breast applicator was developed in close cooperation with Dr. Robert Kuske. The adjustable template with integrated guiding plate ensures exact placement of needles and OncoSmart catheters or flexible implant tubes. The single large template paired with special hole geometry ensures optimal coverage of the complete target volume. Markers are integrated in the template to aid the imaging procedures and provide the opportunity to optimize positioning of the template.

Note:

- The Kuske breast template can be sterilized using ethylene oxide
- User manual 090.706
- Sterilization Advice Chart 094.446

Why the Kuske breast applicator?

- Designed for optimal fit with patient anatomy
- Optimal target coverage including wide volumes
- Excellent dose conformity

“The applicator enables the user to create large volume breast implants. The adjustable template has an integrated guiding template, which ensures an exact placement of needles and flexible implants or OncoSmart catheters. Also, the single large template has a special hole geometry. This applicator allows for excellent coverage of the target volume and an optimized conformity with the patient’s anatomy.”

R. Kuske, MD

Arizona Oncology Services
Scottsdale, Arizona, U.S.

Rowland Adjustable Breast Template (RABIT)

The RABIT holder was developed to ensure parallel positioning of the template pairs. The breast template provides a dose distribution according to the Paris dosimetry system. It includes a subset of single, double and triple plane template pairs with different basal distances. This means all target areas can be covered with this template.

Intended for:

- Interstitial breast brachytherapy

Note:

- The template can be sterilized using steam sterilization
- User manual 090.637
- Sterilization Advice Chart 094.210

Why the RABIT?

- The adjustable template holder will assist in immobilization and needle/implant tube placement
- Different template configurations provide dose optimization to the volume of interest

CT/MR OncoSmart Catheter

For outpatient breast brachytherapy

The CT/MR OncoSmart catheter is an elegant treatment solution for breast brachytherapy. The system allows breast brachytherapy treatments on an outpatient basis, enabling the patient to resume daily life between fractions. It is ideally suited for treatment regimens such as Accelerated Partial Breast Irradiation (APBI) or the delivery of a brachytherapy boost dose as part of Whole Breast Irradiation (WBI).

In addition to breast brachytherapy, the CT/MR OncoSmart catheter can also be used for brachytherapy in head and neck, tongue and soft tissue cases.

Optimizing clinical workflow

The CT/MR OncoSmart catheters are delivered sterile and ready for immediate use. The treatment catheters are inserted only once, at the start of the actual treatment, and remain in place in between fractions. Small buttons with corresponding channel numbers fix the catheters in place and are used for accurate and quick reconnection for sequential fractions. Tailored material characteristics make OncoSmart catheter optimally visible on either CT or MR images.

Intended for:

- Breast
- Head and Neck
- Sarcomas
- Tongue

Note:

- The catheter set contents are for single use only and are delivered sterile, with the exception of the 4F ProGuide
- Insertion needles and the stop tags are delivered unsterile
- Set contents are packed per 6 items, except for # 189802
- User manual 090.709

OncoSmart flange molding system, part # 189016

Quantity	Part number	Description
1	189320	Flange molding tool
2	417018	Li-ion battery Pack
1	417006	Battery charge station
1	189316	Flange molding cutter
1	189367	Cutter flexible implants
1	189369	Spare part set flange molding tool

Why the CT/MR OncoSmart catheter?

- A single multicatheter implant serves multiple treatment fractions
- Allows patients to resume daily life between fractions
- Enables quick and accurate catheter reconnection for follow-up fractions

OncoSmart Upgrade set for microSelectron, part # 103110

Part number	Description
189410 ●	CT/MR OncoSmart catheter set: contains 189418 (sterile, single use) and 189016 (non-sterile, re-usable)

LumenCare® Azure Applicator

The LumenCare Azure applicator offers clinicians an excellent solution for lung brachytherapy applications. It is specifically designed to improve the delivery of lung cancer brachytherapy treatments, expanding the treatable area.

The innovative, contrasting blue-tinted material of the applicator combines kink resistance with flexibility. This novel design permits easy passage through tumor obstructions and improves access to the upper lobe, where many tumor obstructions are found.

Optimal flexibility and kink resistance

With an impressively small bending radius, LumenCare Azure catheters provide unmatched flexibility and strength to treat even the most demanding lung brachytherapy cases.

High visibility

The contrasting blue tint of the catheter provides excellent visualization within the bronchoscope, facilitating easy insertion of the catheter.

Easy insertion into the bronchus

The smoothness of the catheter enables easy insertion and smooth source travel into the bronchus or any other lumen, facilitating fast and simple lung brachytherapy procedures.

Advanced solution for the most complex procedures

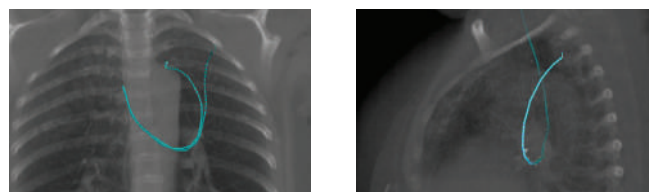

State-of-the-art material characteristics make hard-to-reach places more easily accessible. In the event that the catheter gets obstructed (e.g. through coughing), guide wires are supplied, allowing easy completion of the procedure.

Intended for:

- Intraluminal brachytherapy
- Treatment of the lung or other lumen, e.g. bronchus and bile duct

Note:

- User manual: 777.00266

Why the LumenCare Azure applicator?

- Highly flexible and kink-resistant material to reach challenging tumor locations
- Smoothness of catheter facilitates fast and simple lung brachytherapy procedures
- Superior visibility allows for easy insertion into bronchus

“The more flexible and kink-resistant material of the LumenCare Azure makes it much easier to reach tumors in the upper lobe, an area where many of the lung tumors tend to occur.”

Janusz Skowronek, PhD, Asst. Prof.

Head of Brachytherapy Department
Greater Poland Cancer Centre
Poznań, Poland

Bonvoisin-Gérard Esophageal Applicator

The Bonvoisin-Gérard esophageal applicator is designed to assist in the treatment of an endoscopically obstructed esophagus. By using this special dilation applicator with tapered flexible tip, the treatment area can be reached by bouginage. The bougie tube will also assist in centering the treatment catheter internally to minimize the mucosal dose, while ensuring optimal depth dose penetration of the esophageal wall. Radiographic markers on the bougie tube aid in fluoroscopic placement and localization of the applicator.

Intended for:

- Esophagus

Note:

- No transfer tube is required—the applicator connects directly to the afterloader
- Separate applicator sets are only available for Flexitron afterloaders
- Flexitron needs an applicator adapter, see Optional items
- 094.353 Sterilization Advice Chart for # 085035
- User manual 777.00116 for # 137258

Currently only available for Flexitron

Bonvoisin-Gérard esophageal applicator set, part # 137258

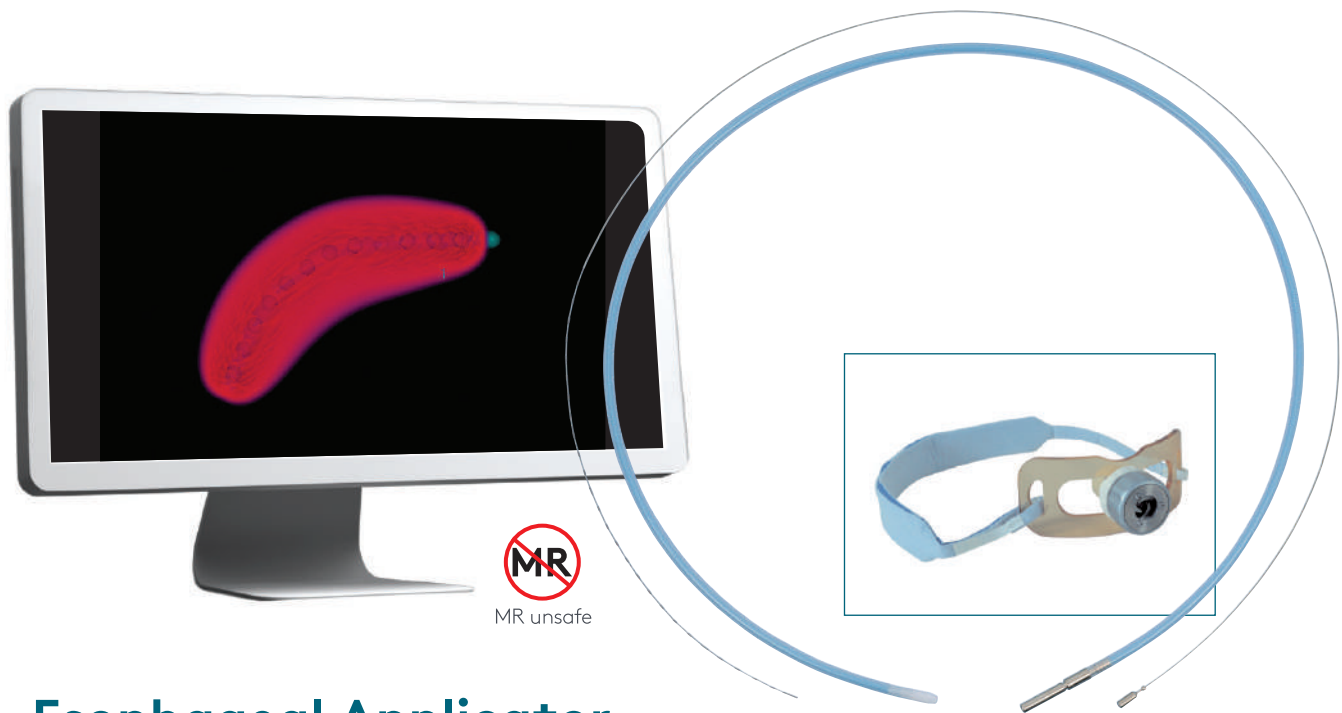

Part number	Description
137259	1400 mm flexible treatment catheter
137261	Bonvoisin-Gérard esophageal appl., 18F (Ø 6 mm)
137263	Bonvoisin-Gérard esophageal appl., 24F (Ø 8 mm)
137265	Bonvoisin-Gérard esophageal appl., 30F (Ø 10 mm)
137276	Applicator fixation mask
137277	Applicator cleaning accessories
137279	Applicator mask strap (pack of 5)

Optional items for Flexitron

Part number	Description
137267	Applicator 36F (Ø 12 mm)
137270	Applicator 45F (Ø 15 mm)
137278	Guide wire pack of 5 pcs (sterile) 2.6 m
137064	Adaptor for 5F catheters
137673	X-ray marker # 1, 140cm

Why the Bonvoisin-Gérard esophageal applicator?

- Easy applicator insertion using endoscopy
- Excellent source centering
- Radio-opaque applicator marking assists placement and localization

Esophageal Applicator

The esophageal applicator is designed for direct insertion into the esophagus. The applicator can be positioned orally under fluoroscopy or endoscopic examination. It is provided with an additional outer layer to reduce the dose to the esophageal mucosa and support applicator integrity.

Note:

- The minimum curvature is 25 mm
- No transfer tube is required. The applicator connects directly to the indexer
- This applicator set can only be used on microSelectron HDR afterloaders
- The applicator can be sterilized using ethylene oxide
- User manual 090.607
- Sterilization advice chart 094.607

Rotterdam Nasopharyngeal Mold Applicator

Optimal dose shaping in nasopharyngeal cavities

The Rotterdam nasopharyngeal mold is manufactured from a flexible silicone material to easily shape the radiation dose in the nasopharyngeal cavity. It consists of two channels on the upper surface to optimize the dose distribution and reduce the surface dose. The mold can remain in place for a series of treatment fractions, while the treatment catheters will be replaced per fraction. This way, patient discomfort between fractions is minimized.

Note:

- The mold applicator and catheter set are delivered unsterile and are for single use only
- User manual 090.678

Order information

Rotterdam Nasopharyngeal Mold set, part # 089068

Quantity	Part number	Description
5	089062 ●	Nasopharyngeal mold applicator
5	089061 ●	Nasopharyngeal catheter set
1	089421	X-ray catheter no. 1; 30 cm
1	089422	X-ray catheter no. 2; 30 cm
1	594588*	K-Y lubricating gel; tube 82 gr

Consumables information

Single use, delivered non-sterile

*When ordered separately, the minimum order quantity is 10 pcs

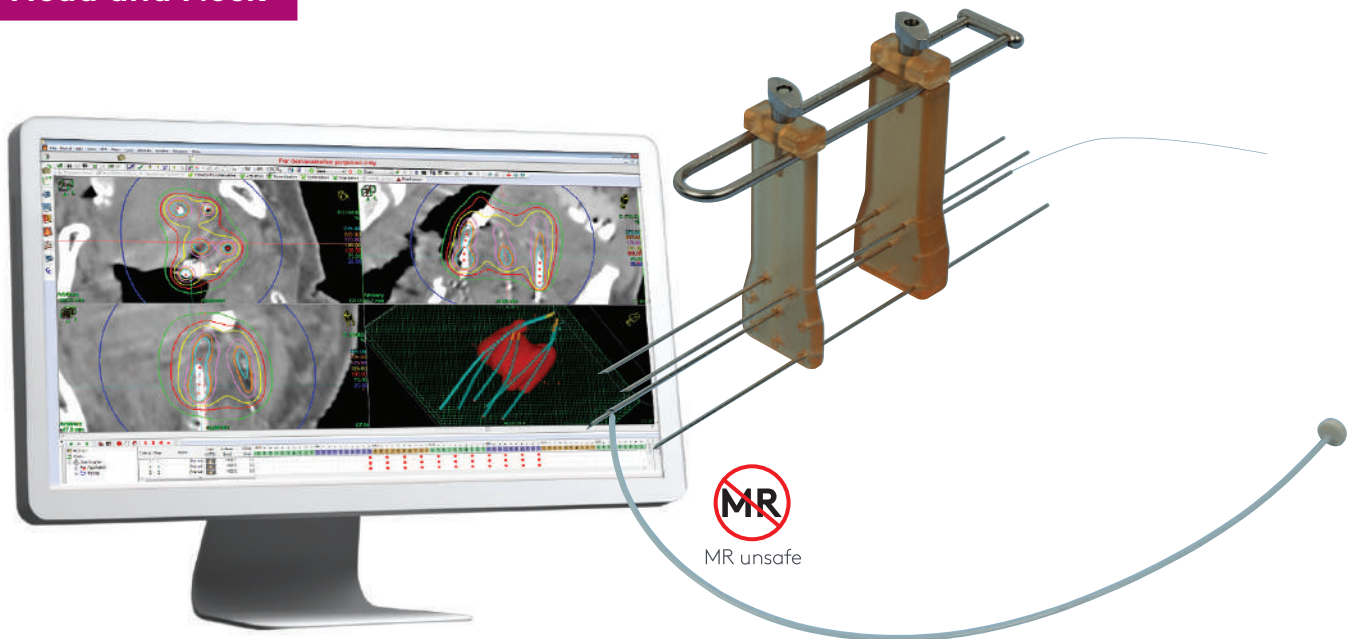

Why the Rotterdam nasopharyngeal mold applicator?

- Easily conforms to a range of nasopharyngeal cavity sizes
- Dual-channel design for optimized dose distribution
- Quick catheter reinsertion for follow-up fractions

“I wanted an applicator that was easy to use, did not require a general anesthetic and that would closely conform to the mucosa of the nasopharynx. I found it in the Rotterdam nasopharyngeal applicator.”

Prof. Dr. P. Levendag

Daniel den Hoed Clinic
Rotterdam, The Netherlands

Pipard Tongue Template

The Pipard tongue template is designed for accurate placement of needles and flexible implant tubes in the base of the tongue. A variety of template configurations provides the option of dose optimization to the area of interest, while a reproducible dosimetry can be achieved. The template can be used for the looping implantation technique by using double leader flexible implant tubes.

Note:

- The applicator can be sterilized using steam sterilization or ethylene oxide
- User manual 090.641

Order information

Pipard tongue template complete set, part # 045410

Quantity	Part number	Description
1	045435	Adjustable tongue template holder
1	045432	Tongue template, 8 holes, 1.5 mm
1	045433	Tongue template, 10 holes, 1.5 mm
10	089700	Leader insertion needle, 1.5 x 120 mm (1 piece)

Optional items

Part number	Description
089701	Leader insertion needle, 1.5 x 160 mm (1 piece)
089702	Leader insertion needle, 1.5 x 200 mm (6 pcs)
various* ●	Flexible implant tubes
various* ●	OncoSmart catheter

Consumables information

Valencia Skin Applicator

Optimal dose coverage to the skin

Brachytherapy offers an excellent non-invasive solution to complement or replace surgery for skin cancer. With our specialized solutions, a high radiation dose can be delivered to the tumor in a few fractions with a low dose to the surrounding area, providing a short and effective treatment.

Controlled dosimetry for skin and surface treatments

The Valencia skin applicator is a tungsten-shielded applicator for contact treatments. The applicator's unique fixed flattening filter provides a flat and homogeneous isodose pattern. The flat dose can be applied very precisely to skin and surface targets. This unique applicator was designed in cooperation with La Fe University Hospital in Valencia, Spain.

Reliable treatment

The Valencia skin applicator also contains a source stopper to secure a distal reference point for the source in the applicator, resulting in a reliable and reproducible treatment. Plastic caps on the applicator help to avoid over-dosage and assist with correct applicator positioning. Reinforced shielding at the back of the applicator adds to patient safety during treatment.

Intended for:

- Skin and surface treatments

Note:

- Applicator provided with two types of treatment caps:
 - 1) cap with marker
 - 2) cap for treatment
 The cap with the marker ring is used to determine the correct position of the applicator on the surface
- Applicator must be used with treatment cap in place
- The applicator set can be sterilized using steam sterilization
- Dose distribution charts are available for Iridium-192, not available for Cobalt-60. The charts are not included in Oncentra Brachy treatment planning system but delivered separate charts with the applicator
- Manual 777.00237

Leipzig Applicator

The Leipzig applicator is tungsten shielded and designed for treatment of surface lesions, utilizing a contact treatment technique. It can be used for superficial skin, intra-oral and vaginal cuff lesions. It provides an excellent alternative for orthovoltage or electron treatments.

Intended for:

- Skin and Surface

Note:

- Applicator provided with caps for imaging and for treatment
- Applicator must be used with treatment cap in place
- This applicator is also available as part of the Advanced Skin package # 103118
- The applicator set can be sterilized using steam sterilization
- User manual 777.00237
- Dose distribution charts are available for Iridium-192, not available for Cobalt-60. The charts are not included in Oncentra Brachy treatment planning system but delivered separate charts with the applicator

089095	Freiburg Flap applicator set
189701	Valencia skin applicator set

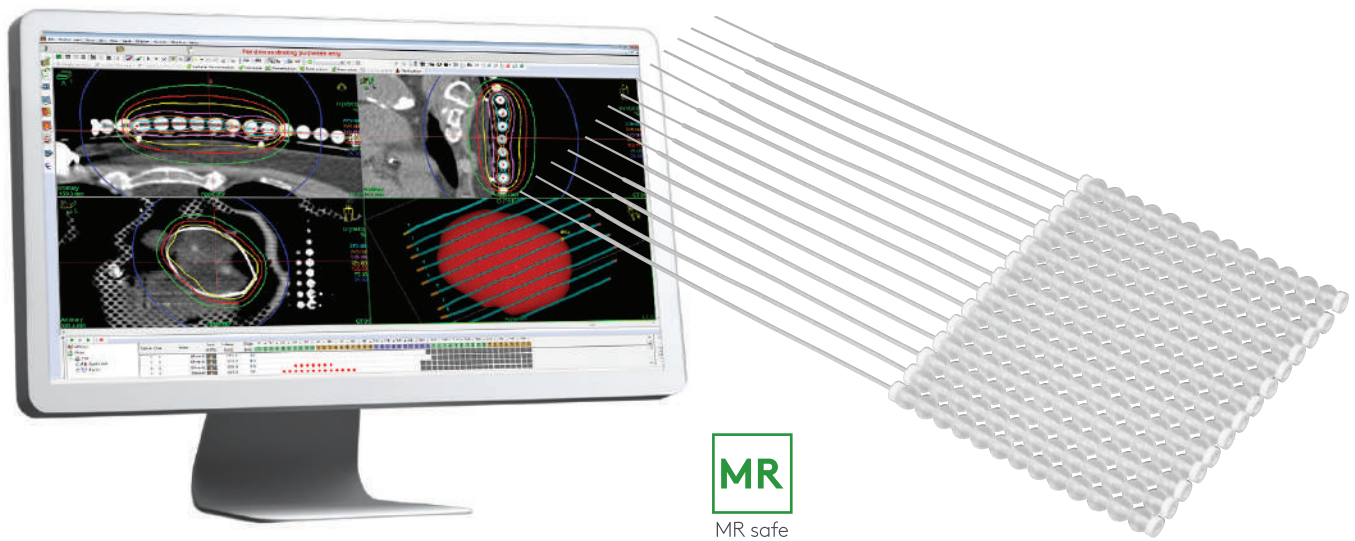

Why the Leipzig applicator?

- Easy to use
- Excellent solution for superficial lesions

“The Leipzig applicators were designed to give the optimum isodose and treat to the correct depth without causing excessive skin reaction.”

Prof. Dr. Prager

Universität Leipzig
Leipzig, Germany

Freiburg Flap Applicator

Shaping surface brachytherapy

The Freiburg Flap is a flexible mesh-style surface mold for skin or intra-operative surface treatments. The flexible applicator can easily be shaped to fit curved surfaces. It is ideally suited for large lesions or surface lesions that are difficult to cover such as on the skull or face.

Easily shaped to the target area

The Freiburg Flap consists of multiple spheres attached to each other that hold and guide up to 36 treatment catheters. The applicator can be curved to match the target surface and shaped to match the right size. The Freiburg Flap also ensures a constant distance of 5 mm from the treatment catheter to the surface.

Intended for:

- Skin and Surface
- Intra-operative

Note:

- Applicable for up to 28 days' implantation
- Treatment channels are set 10 mm apart from each other, and have a length of 240 mm
- The flexible implant tubes and buttons are delivered sterile and are for single use only
- User manual 090.677

Consumables information

Single use, delivered sterile

Why the Freiburg Flap applicator?

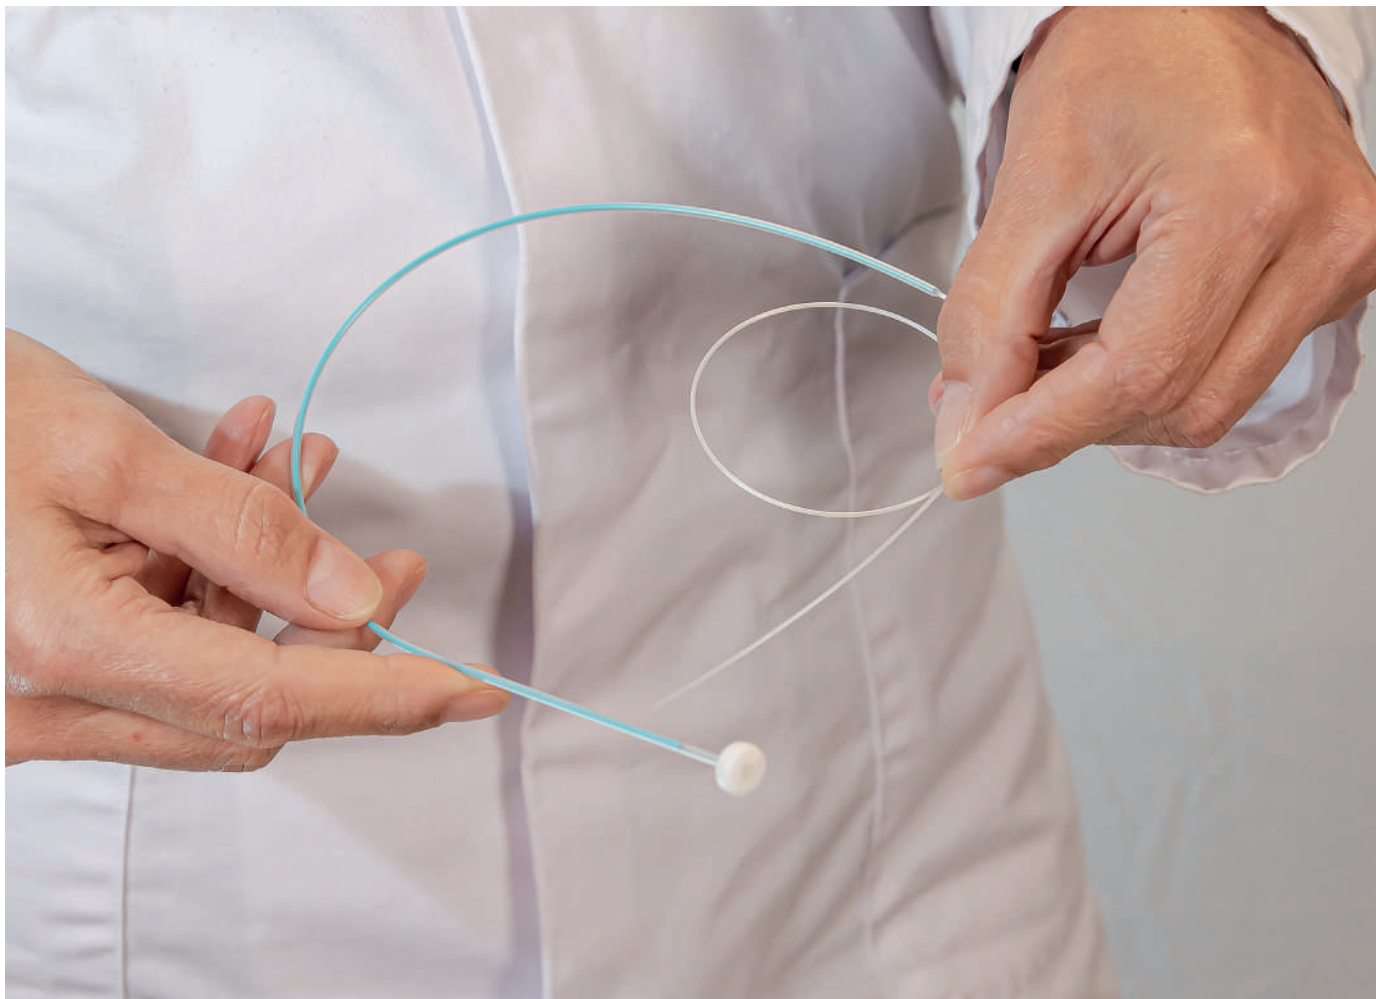

- Adaptable for large and curved anatomies
- Easy to resize to match treatment area
- Consistent thickness for reproducible dosimetry

“The equidistance of the holes guarantees a precise separation of the catheters. The Freiburg Flap material allows a precise positioning in respect of the target and verification of the treatment area.”

ProGuide Needles, Obturators and Markers

The range of OncoSmart ProGuide needles has been designed for interstitial applications and is compatible with state-of-the-art imaging modalities such as CT and MR imaging. They are made from a high-quality plastic and specifically developed for use with Elekta afterloaders. ProGuide needles are available with either a sharp tip to enable easy penetration of the skin surface or with a round tip for maximum patient safety during treatment. Rigidity of the plastic ProGuide needle is created by placing an obturator inside the needle during insertion.

The obturator is a rigid tungsten alloy tool that maintains needle stability during insertion, preventing needle kinking or breaking. The curve in the obturator is intentional and prevents the obturator from shifting within the needle during insertion.

The OncoSmart ProGuide CT Markers (see Appendixes) are designed to indicate the first source positions on CT images of ProGuide interstitial needle implants. The markers fit needle diameters from 5F to 6F and are kept in place during imaging by means of a built-in locking mechanism. The markers are reusable and can be autoclaved. Each marker length has a unique color-coded knob.

Note:

- ProGuide needles are delivered sterile, and are for single use only
- Obturators must be placed in the ProGuide needle prior to insertion for stability and to avoid needle damage
- Obturators are not delivered sterile and can be processed using steam sterilization or ethylene oxide
- Kink protection tubes are available for use with ProGuide needles
- User manual 090.695

110586 ●	ProGuide sharp needle set, 6F x 200 mm (12x6)
110587 ●	ProGuide sharp needle set, 6F x 200 mm (10x1)
110588 ●	ProGuide sharp needle set, 5F x 240 mm (3x6)
110589 ●	ProGuide sharp needle set, 5F x 240 mm (6x6)
110590 ●	ProGuide sharp needle set, 5F x 240 mm (12x6)
110591 ●	ProGuide sharp needle set, 5F x 240 mm (10x1)

Why ProGuide needles and markers?

- Flexibility in use
- Compatible with state-of-the-art imaging modalities

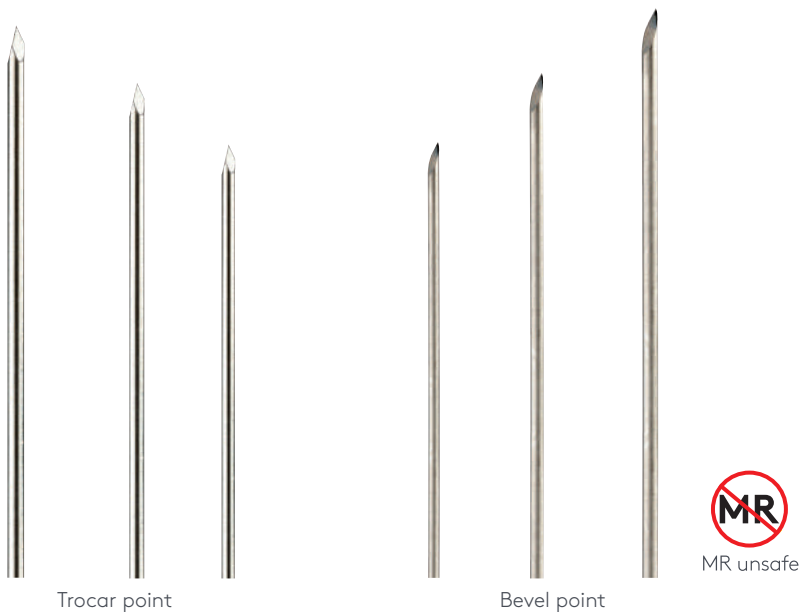

Obturators

Part number	Description
189628	ProGuide obturator bulk set, 6F x 240 mm (12 pcs)
189629	ProGuide obturator bulk set, 6F x 200 mm (12 pcs)
189631	ProGuide obturator bulk set, 5F x 240 mm (12 pcs)
110268	Obturators, for needles 6F and l = 294 mm (flexible, 5 pcs)
089636	Handle for insertion obturator
089001	Obturator for 1.5 mm needle x 80 mm
089003	Obturator for 1.5 mm needle x 100 mm
089005	Obturator for 1.5 mm needle x 120 mm
089007	Obturator for 1.5 mm needle x 140 mm
089009	Obturator for 1.5 mm needle x 160 mm
089011	Obturator for 1.5 mm needle x 180 mm
089013	Obturator for 1.5 mm needle x 200 mm
083250	Obturator for 1.9 mm needle x 80 mm
083252	Obturator for 1.9 mm needle x 100 mm
083254	Obturator for 1.9 mm needle x 120 mm
083256	Obturator for 1.9 mm needle x 140 mm
083258	Obturator for 1.9 mm needle x 160 mm
083260	Obturator for 1.9 mm needle x 180 mm
083262	Obturator for 1.9 mm needle x 200 mm
083266	Obturator For 1.9 mm needle x 240 mm
083272	Insertion obturator for 1.9 mm needle x 294 mm

Consumables information

Single use, delivered sterile

¹ These sets include obturators

Stainless Steel Interstitial Needles

Interstitial needles are used for treatment of carcinoma where no lumen or cavity is available or where additional and very precise target area coverage is required. The needles are designed to maintain their rigidity and sharpness throughout multiple treatments, in combination with the appropriate templates. Stainless steel needles have a needle tip that is either bevel or trocar shaped. The round tip is designed to minimize tissue damage and optimize ease in implantation. The trocar and bevel tips facilitate insertion in the tissue.

Obturators can be placed inside the needle during insertion to create additional rigidity. The needles are directly connected to the transfer tube of the Elekta afterloader.

Note:

- Needles are described by their outside diameter and length
- Ø 1.3 mm needles can only be used with microSelectron
- Needles should be inspected prior to use. Any needle that is blunt, corroded or bent should be discarded
- Metal needles can be sterilized using steam sterilization and ethylene oxide
- User manual 090.619

Order information

Interstitial needle basic set 1.5 mm, part # 083900

Quantity	Part number	Description
2	083914	Trocar needle, 1.5 mm x 80 mm (10 pcs)
2	083916	Trocar needle, 1.5 mm x 100 mm (10 pcs)
2	083918	Trocar needle, 1.5 mm x 120 mm (10 pcs)
2	083920	Trocar needle, 1.5 mm x 140 mm (10 pcs)
2	083922	Trocar needle, 1.5 mm x 160 mm (10 pcs)
2	083924	Trocar needle, 1.5 mm x 180 mm (10 pcs)
2	083926	Trocar needle, 1.5 mm x 200 mm (10 pcs)
2	089001	Obturator for 1.5 mm needle x 80 mm (10 pcs)
2	089003	Obturator for 1.5 mm needle x 100 mm (10 pcs)
2	089005	Obturator for 1.5 mm needle x 120 mm (10 pcs)
2	089007	Obturator for 1.5 mm needle x 140 mm (10 pcs)
2	089009	Obturator for 1.5 mm needle x 160 mm (10 pcs)
2	089011	Obturator for 1.5 mm needle x 180 mm (10 pcs)
2	089013	Obturator for 1.5 mm needle x 200 mm (10 pcs)
1	045004	Torque screwdriver, 1.27 mm
4	089025	Needle stopper 1.5 mm (10 pcs)

Interstitial needle basic set 1.9 mm, part # 083040

Quantity	Part number	Description
2	083050	Trocar needle, 1.9 mm x 80 mm (10 pcs)
2	083052	Trocar needle, 1.9 mm x 100 mm (10 pcs)
2	083054	Trocar needle, 1.9 mm x 120 mm (10 pcs)
2	083056	Trocar needle, 1.9 mm x 140 mm (10 pcs)
2	083058	Trocar needle, 1.9 mm x 160 mm (10 pcs)
2	083060	Trocar needle, 1.9 mm x 180 mm (10 pcs)
2	083062	Trocar needle, 1.9 mm x 200 mm (10 pcs)
2	083250	Obturator for 1.9 mm needle x 80 mm (10 pcs)
2	083252	Obturator for 1.9 mm needle x 100 mm (10 pcs)
2	083254	Obturator for 1.9 mm needle x 120 mm (10 pcs)
2	083256	Obturator for 1.9 mm needle x 140 mm (10 pcs)
2	083258	Obturator for 1.9 mm needle x 160 mm (10 pcs)
2	083260	Obturator for 1.9 mm needle x 180 mm (10 pcs)
2	083262	Obturator for 1.9 mm needle x 200 mm (10 pcs)
4	083001	Stainless steel stopper, 1.9 mm needle (10 pcs)
1	045004	Torque screwdriver, 1.27 mm

Optional items

Part number	Description
083147	Sterilizing caps, 1.9 mm (50 pcs)

Why stainless steel interstitial needles?

- Designed to maintain their rigidity and sharpness throughout multiple treatments
- Needle tip available in various geometries to adapt to clinical needs

Trocar point needles, Ø 1.5 mm

Quantity	Part number	Description
1	083914	Trocar needle, 1.5 mm x 80 mm (10 pcs)
1	083916	Trocar needle, 1.5 mm x 100 mm (10 pcs)
1	083918	Trocar needle, 1.5 mm x 120 mm (10 pcs)
1	083920	Trocar needle, 1.5 mm x 140 mm (10 pcs)
1	083922	Trocar needle, 1.5 mm x 160 mm (10 pcs)
1	083924	Trocar needle, 1.5 mm x 180 mm (10 pcs)
1	083926	Trocar needle, 1.5 mm x 200 mm (10 pcs)

Trocar point needles, Ø 1.9 mm

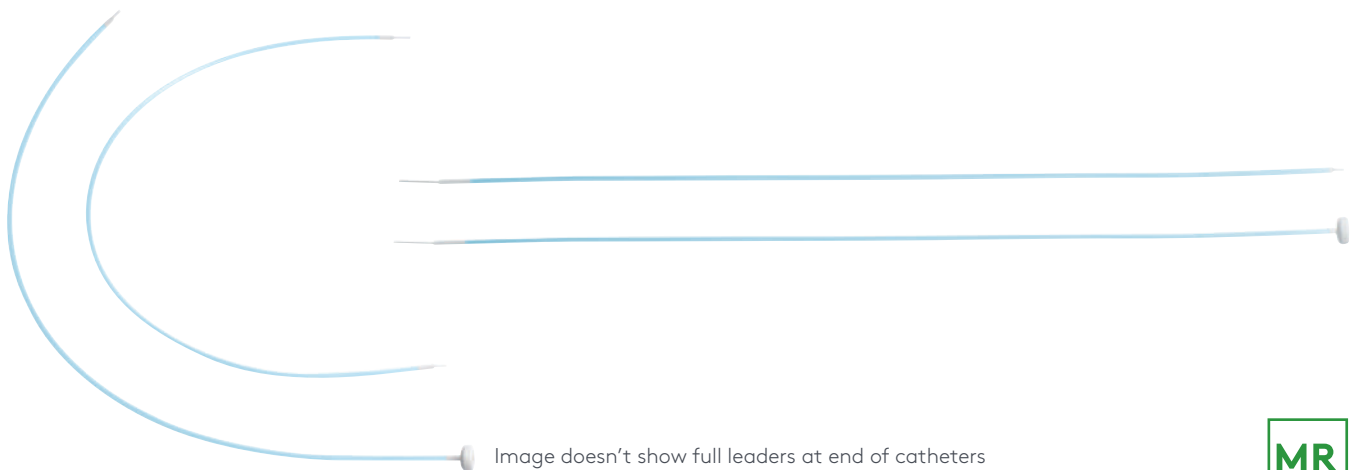

Quantity	Part number	Description
1	083050	Trocar needle, 1.9 mm x 80 mm (10 pcs)
1	083052	Trocar needle, 1.9 mm x 100 mm (10 pcs)
1	083054	Trocar needle, 1.9 mm x 120 mm (10 pcs)
1	083056	Trocar needle, 1.9 mm x 140 mm (10 pcs)
1	083058	Trocar needle, 1.9 mm x 160 mm (10 pcs)
1	083060	Trocar needle, 1.9 mm x 180 mm (10 pcs)
1	083062	Trocar needle, 1.9 mm x 200 mm (10 pcs)
1	083066	Trocar needle, 1.9 mm x 240 mm (10 pcs)
1	083072	Trocar needle, 1.9 mm x 294 mm (10 pcs)

Bevel point needles, Ø 1.9 mm

Part number	Description
083045	Bevel needle, 1.9 mm x 200 mm (10 pcs)

Optional items

Part number	Description
083147	Sterilizing caps, 1.9 mm (50 pcs)

Flexible Implant Tubes

The flexible implant tubes are developed for treatments that require a moldable source path. The flexible implant tubes are equipped with 'leaders' to run the implant tube through a channel in the tissue that is preformed by a leader insertion needle. The flexible implant tubes are available in various configurations: single leader with button end; single leader with blind end; or double leader. They arrive sterilized and ready for immediate clinical use.

Note:

- Flexible implant tubes are delivered sterile and are for single use only
- Flexible implant tubes are packed in pouches of six, with six pouches per box
- Buttons are packed in pouches of six with 12 pouches per box
- For Flexitron afterloaders, only flexible implant tubes with length ≤ 400 mm can be used
- Available only in single leader or double leader
- Buttons are only radio-opaque which is compatible with X-Ray, CT and MR image modalities
- User manual 090.710

*The insertion needles are not MR safe

Order information

Flexible implant tube set, 6F, 30 cm, part # 189400

Quantity	Part number	Description
2	189300 ●	Flexible implant tube, 6F, single leader, 30 cm (box of 36)
2	189298 ●	Flexible implant tube, 6F, double leader, 30 cm (box of 36)
1	189282 ●	Radio-opaque button white, 6F (box of 72)
1	189284 ●	Radio-opaque button black, 6F (box of 72)
1	189286 ●	Radio-opaque button red, 6F (box of 72)
1	189288 ●	Radio-opaque button blue, 6F (box of 72)
1	189290 ●	Radio-opaque button green, 6F (box of 72)
1	189367	Cutter flexible implants
1	189437 ●	Leader Insertion needles, 1.5 x 200 mm (box of 72)

Optional items

Part number	Description
189300 ●	CT/MR flexible implant tube, 6F, single leader, 30 cm (box of 36)
189510 ●	Flexible implant tube, 5F, single leader, 30 cm (box of 36)
189508 ●	Flexible implant tube, 5F, double leader, 30 cm (box of 36)
189292 ●	Radio-opaque button yellow, 6F (box of 72)
189294 ●	Radio-opaque button brown, 6F (box of 72)
189472 ●	Radio-opaque button white, 5F (box of 72)
189474 ●	Radio-opaque button black, 5F (box of 72)
189476 ●	Radio-opaque button red, 5F (box of 72)
189478 ●	Radio-opaque button blue, 5F (box of 72)
189480 ●	Radio-opaque button green, 5F (box of 72)
189482 ●	Radio-opaque button yellow, 5F (box of 72)
189484 ●	Radio-opaque button brown, 5F (box of 72)
045103	S.S. button, Henschke
045046	Bevel needle, Open End, 1.5 x 200 mm (1 x 10 pcs)
089021	Catheter insertion set, 6F trocar
089023	Catheter insertion set, 6F bevel
594456	Emergency button cutter
089420	X-ray catheter set, 30 cm (1-18)
030100	Push Fit disconnection tool
089348*	Kink protection tube, for 6F flexible
089345*	Kink protection tube, for transfer tube
080026	Applicator adapter 6F (box of 2)

Consumables information

Single use, delivered sterile

*Minimum order quantity is 50 pcs

Why flexible implant tubes?

- Easy to use for interstitial treatments (i.e. tongue, breast and soft tissue)

Cervix Rotterdam applicator set IU-45°, part # 137217

Part number	Description
137219	Right ovoid tube I, IU-45° (ti)
137220	Left ovoid tube III, IU-45° (ti)
137191	Ovoid pair, Ø 20 mm, small
137192	Ovoid pair, 25 mm, medium
137193	Ovoid pair, 30 mm, large
137222	Intrauterine tube IIIII, IU-45°, l = 30 mm, (ti)
137224	Intrauterine tube IIIII, IU-45°, l = 50 mm, (ti)
137226	Intrauterine tube IIIII, IU-45°, l = 70 mm, (ti)
137247	Ovoid tube coupling for 45°, for ovoids only (ti)
137570	Closing caps (25/pack)
137574	Screwdriver for ovoid screws

Optional items for 45° set

Please note that the optional items dedicated to this applicator will also become legacy products

Part number	Description
137245	Vaginal cylinder locking pin (ti)
137240	Vaginal cylinder and cap 45°, Ø 30 mm, l = 60 mm
137228	Vaginal cylinder and cap 45°, Ø 37 mm, l = 60 mm
137241	Vaginal cylinder and cap 45°, Ø 40 mm, l = 60 mm
137221	Intrauterine tube IIIII, IU-45°, l = 20 mm, (Ti)
137223	Intrauterine tube IIIII, IU-45°, l = 40 mm, (Ti)
137225	Intrauterine tube IIIII, IU-45°, l = 60 mm, (Ti)

Optional items for all Cervix Rotterdam applicators

Please note that the optional items dedicated to this applicator will also become legacy products

Part number	Description
137244	Rectal spacer locking pin (ti)
137243	Rectal spacer, 30 mm wide, 5 mm spacing under ovoid
137242	Rectal spacer, 30 mm wide, behind ovoid
137190	Mini ovoid pair, 15 mm
137577	Spare ovoid screws (set of 5 pcs)
189676 and following* ●	Smit Sleeves CT/MR for Ti intrauterine tube, l = 20 mm and longer, d = 6 mm (box of 10 pcs)
101015	CT/MR sterilization box

MR safe

Set is not commercially available anymore

Source Position Check Ruler for microSelectron

Source Position Check Ruler for Flexitron

Source Position Check Ruler

The Source Position Check Ruler is designed for verification of the correct treatment position of the sources and check cable, and of the length of each of the transfer tubes. It can be used with either the mechanical indicator or GAFchromic™ filmstrip*, a method that enables instant logging of the result of the measurement.

The Source Position Check Ruler has embedded markers that allow multiple measurements and serve as reference to validate correct positioning of the GAFchromic filmstrip. The films are transparent for easy digitizing or scanning, and are self-developing.

Note:

- User manual for Flexitron: 777.00110
- User manual for microSelectron: 090.689

Order information

Source Position Check Ruler for Flexitron

Part number	Description
136196	3-channel Source Position Check Ruler

*It is recommended to store GAFchromic film in the dark until use. GAFchromic film is only for use with the microSelectron afterloader.

Flexitron adaptor overview

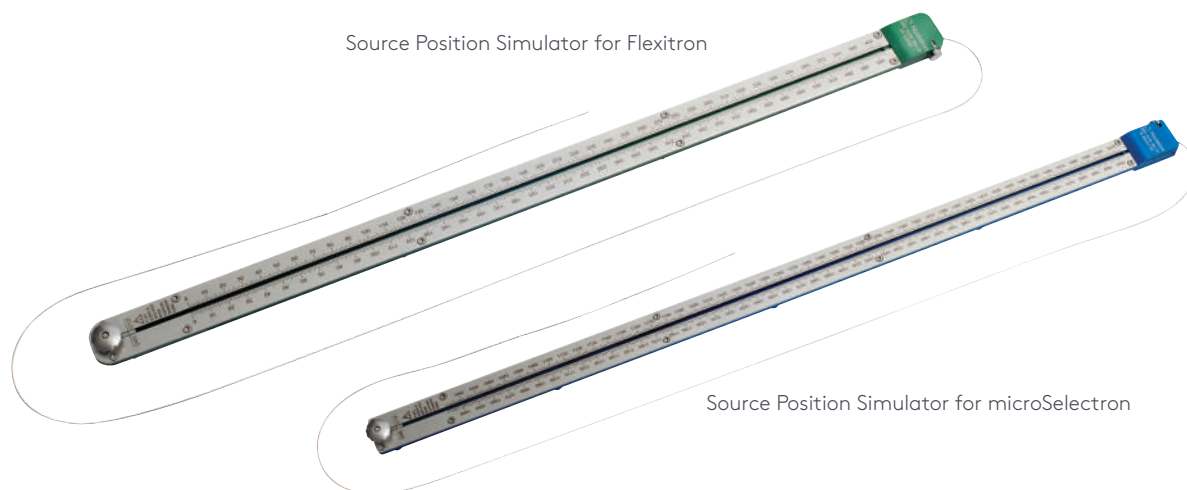

Part number	Source Position Check Ruler adapter set to connect	Transfer tube part number
137040	Gynecological titanium transfer tubes	137063
137041	5F catheter transfer tubes (old versions—compatible to transfer tube sets delivered before May 2014)	137090/137091 137092/137093
	6F catheter transfer tubes (old versions—compatible to transfer tube sets delivered before May 2014)	137094/137095 137096/137097
137042	5F catheter transfer tubes	137090/137091 137092/137093

Optional items for microSelectron

Part number	Description
111268	Standard slider with dummy cable
111275	Optional slider with simulator wire with x-ray markers

CT/MR Applicator Clamp

The CT/MR applicator clamp is designed for fixation of applicators to a patient treatment table or patient bed. It is compatible with use of CT and MR imaging. With one knob, all variables such as length, rotation, sloping and angle of the inserted applicator can be fixed. For fixation of the applicator itself, various inserts are provided that allow fitting with all available Elekta Brachytherapy applicators within the clamp. The entire assembly requires no oil, and can easily be taken apart for cleaning. The CT/MR applicator clamp can be attached to a base plate for immobilization in any hospital bed or the clamp can be mounted on an axle in order to attach the clamp to a hospital bed, IBU table etc.

Benefits:

- Can be used with various imaging modalities
- Accurate applicator fixation
- Easy to use
- The baseplate is x-ray translucent
- All clamp components can be sterilized using steam sterilization

Note:

- User manual: 090.716

Order information

CT/MR applicator clamp with base plate, # 189932

Part number	Description
189933	Fixation part (1 pcs)
189934	Base plate (1 pcs)
189981	Inserts Ø 3 mm (titanium coloured) (4 pcs)
189980	Inserts Ø 6 mm (white coloured) (4 pcs)
189982	Inserts Ø 12 mm (black coloured) (4 pcs)

CT/MR applicator clamp with axle, # 189931

Part number	Description
189933	Fixation part (1 pcs)
189934	Axle (1 pcs)
189981	Inserts Ø 3 mm (titanium coloured) (4 pcs)

189980	Set of 4 inserts Ø 6 mm (white colored)
189982	Set of 4 inserts Ø 12 mm (black colored)
189951	Axle knob support (small)
189952	Spare applicator fixation knob (small)
189957	Fixation knob
189958	Axle knob support (large)
189959	Spare clamp fixation knob (large)
110778	Applicator clamp adapter set for VCMC

Patient Belt Coupling (PBC)*

PBC sets, featuring the quick-release coupling device, are designed to support a user-friendly fixation of transfer tubes and applicator components. The quick-release coupling enables a patient to be connected and disconnected from the afterloader in a quick and easy way. Dedicated transfer tubes are connected to separate parts of the quick-release coupling and similarly to the patient and afterloader. The patient connector part of the quick-release coupling is fixed in position using a patient belt. With all transfer tubes in place on the patient and on the afterloader, the separate parts of the quick-release coupling are connected or disconnected by a simple twist. Complete PBC sets for various types of applicators are available.

* Available only for use with microSelectron PDR afterloader

Note:

· Manual number: 090.653

Order information

PBC set for needles and flexibles, part # 111379

Part number	Description
030299	Patient waist belt set
111440	Coupling transfer tube set for needles (1-18)
111480	Coupling transfer tube set 6F flexibles (1-18)
079087	Quick-release coupling set

Spreading Clip

Part number	Description
152040	Spreading Clip

Ovoid pairs

Part number	Description
152025	Interstitial Ovoid Pair 15 mm
152026	Interstitial Ovoid Pair 20 mm
152027	Interstitial Ovoid Pair 25 mm
152028	Interstitial Ovoid Pair 30 mm
152029	Interstitial Ovoid Pair 35 mm
152030	Interstitial Ovoid Pair 40 mm

Cleaning brush

Part number	Description
189040	Cleaning brush Ø 2.5 mm x 250 mm (set of 3)
189043	Cleaning brush Ø 6.5 mm x 100 mm (set of 3)

Tubes locking clip

Part number	Description
152032	Tubes locking clip

Intrauterine tubes

Part number	Description
126013	Intrauterine tube, 0 mm
126014	Intrauterine tube, 30 mm, 30°
126015	Intrauterine tube, 40 mm, 30°
126016	Intrauterine tube, 50 mm, 30°
126017	Intrauterine tube, 60 mm, 30°
126018	Intrauterine tube, 70 mm, 30°
126019	Intrauterine tube, 30 mm, 15°
126020	Intrauterine tube, 40 mm, 15°
126021	Intrauterine tube, 50 mm, 15°
126022	Intrauterine tube, 60 mm, 15°
126023	Intrauterine tube, 70 mm, 15°

Needle lock tool

Part number	Description
137290	Needle lock tool

Perineal bar

Part number	Description
126205	Perineal bar (1 pcs)

Perineal template dorsal

Part number	Description
126202	Perineal template dorsal 0°
126203	Perineal template dorsal 12°

Interstitial lunar ovoid tubes

Part number	Description
126001	Interstitial lunar ovoid tube 22 mm 60° right
126002	Interstitial lunar ovoid tube 22 mm 60° left
126003	Interstitial lunar ovoid tube 26 mm 60° right
126004	Interstitial lunar ovoid tube 26 mm 60° left
126005	Interstitial lunar ovoid tube 30 mm 60° right
126006	Interstitial lunar ovoid tube 30 mm 60° left

Fixation element

Part number	Description
126200	Fixation element

Interstitial lever

Part number	Description
126206	Interstitial lever

Perineal template ventral

Part number	Description
126204	Perineal template ventral 0° (1 pcs)

Vaginal caps

Part number	Description
126007	Vaginal cap 22 mm right
126008	Vaginal cap 22 mm left
126009	Vaginal cap 26 mm right
126010	Vaginal cap 26 mm left
126011	Vaginal cap 30 mm right
126012	Vaginal cap 30 mm left

Fixation clip

Part number	Description
126201	Fixation clip

Insertion tool

Part number	Description
189714	Insertion tool (1 pcs)

Optional items

Cervical stopper

Part number	Description
110954	Cervical stopper for Fletcher CT/MR shielded

Ovoid cap

Part number	Description
110960	Ovoid cap

Bracelet for guiding tubes

Part number	Description
129003	Bracelet for guiding tubes (5 pcs)

Number tag for guiding tubes

Part number	Description
129004	Number tag for guiding tubes (4 pcs x 5 pouches)

Guiding tubes

Part number	Description
129001	Guiding tubes interstitial (lunar) ovoid (5 pcs)
129002	Guiding tubes for vaginal cap/interstitial tube (5 pcs)

Fixation screws

Part number	Description
110771	Fixation screws (5 pcs)

Lock insert set for plastic needles

Part number	Description
137286/ 137287/parts	Lock insert set for plastic needles (20 pcs)

Flange molding cutter

Part number	Description
189316	Flange molding cutter (1 pcs)

Flange molding tool

Part number	Description
189320	Flange molding tool (1 pcs)

Cutter flexible implants

Part number	Description
189367	Cutter flexible implants (1 pcs)

Smit Sleeve, Ø 9 mm—for use with 6 mm intrauterine tubes

Part number (box of 10)	Part number (box of 3)	Description
189566 ●	110599 ●	Smit sleeve, 40 mm

The use of Smit Sleeves slightly dilates the cervix, facilitating reinsertion of the intrauterine tube for follow-up fractions. It acts as a cervical stopper and provides tissue spacing to reduce mucosal dose. The soft material of the Smit Sleeve enables insertions up to 28 days.

Note:

- Delivered sterile, single packed and for single use
- User manual 090.712
- Can remain in place up to 28 days

Smit Sleeve, Ø 6 mm—for use with 4 mm intrauterine tubes

Part number (box of 10)	Part number (box of 3)	Description
189676 ●	110593 ●	Smit sleeve, l = 20 mm
189677 ●	110594 ●	Smit sleeve, l = 40 mm
189679 ●	110595 ●	Smit sleeve, l = 60 mm
189681 ●	110596 ●	Smit sleeve, l = 70 mm
189682 ●	110597 ●	Smit sleeve, l = 80 mm
189683 ●	110598 ●	Smit sleeve, l = 100 mm

Perineal bar set

Part number	Description
110773	Perineal bar set for vaginal CT/MR multi channel

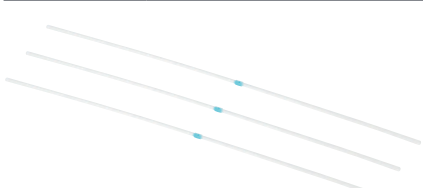

Applicator clamp adapter

Part number	Description
110778	Applicator clamp adapter

Catheter with collar

Part number	Description
110800	Catheter with collar

Li-ion battery pack

Part number	Description
417018	Li-ion battery pack (1 pcs)

Titanium needle stopper set

Part number	Description
189996	Titanium needle stopper set (1 pcs)

Battery charge station

Part number	Description
417006	Battery charge station (1 pcs)

Emergency button cutter

Part number	Description
594456	Emergency button cutter (1 pcs)
